Abstract

Power-Splitting Pressure Switch

NOTE: This wheel must not remain bypassed or bridged, since steering will be applied when necessary, may stall the engine and cause loss of steering control.

The Power Steering Pressure Switch (PSP) (PSP2) which is a pressure sensitive switch that detects when pressure within the power steering system reaches a specified level. To prevent engine stall and maintain idle quality during parking maneuvers, the PCM limits the engine idle speed by approximately 100 RPM.

The FSP switch is a normally closed pressure switch. Under no-load conditions the switch connects pin B31 to Signal Return (SGRTN). When steering load is high, the FSP opens and the signal is detected as FSP-Hi.

Distance Navigation control is via the infrared receiver above the colour screen. It is aimed directly at the Car Box module and does not have any interface to the screen. The video image is projected directly at the colour screen. When the Car Box module display is switched on, a video signal line is grounded between the Car Box Module and the Screen module. This then runs the Car Box Video on the back ground display on the screen and the ICC function become active on screen.

The Cabin Temperature Sensor and remote key receiver antennas are also directly wired to the ECM and have no connection to the Audio Module.

If the IOC is replaced, the CTS calibration factor needs to be brought to the OEM (refer to section 419-12). The IOC-Audio Security Module Reconfiguration will be required. WDS must be used for this operation.
