J.A. Washington, 2012-12-06 Although there are a number of comprehensive books in clinical microbiology there remains a need for a manual that can be used in the clinical laboratory to guide the daily performance of its work Most of the existing publications provide detailed and precise information for example by which a microorganism can be characterized and identified beyond any doubt however the number of tests involved in this process exceeds the capabilities and resources of most clinical laboratories and are irrelevant for patient care It is therefore necessary in any clinical laboratory to extract from reference manuals textbooks and journals those tests and procedures that are to be used to complete the daily workload efficiently and accurately as possible It is also essential in the clinical laboratory to determine on the basis of the kind of specimen being examined which microorganisms are clinically relevant and require isolation and identification and which should either be excluded selectively or simply regarded as indigenous flora and therefore not specifically identified Cost and time limit a laboratory's resources and priorities must be established for handling the workload The procedures described in this manual are those selected by our staff for use in the clinical laboratory on the basis of clinical relevance accuracy reproducibility and efficiency Alternative procedures when considered equivalent on the basis of personal or published experience have been included where appropriate
