Heri Iswanto,2020-11-11

Lean culture should be developed so that the goal to improve a process or business condition on a continuous basis can be achieved. Organizations with a lean culture have reaped many successful experiences in implementing lean so it is seen as a legitimate methodology for organizations. New employees coming into an organization that has a lean culture will be taught to see, think, and feel from a lean perspective in dealing with problems in their job. Lean needs to be a cultural mindset for all for an organization to remain successful. The effort to build a lean culture relies on the support and active participation of leaders as the agents of change. Research shows that the success of a lean implementation is around 50% depending on leadership while the remaining 30% is on finance, 10% on organization and culture, and 10% on skills and expert human resources. In general, leaders play a role in developing subordinates' problem-solving skills and producing various continuous improvement efforts. In addition, leaders are responsible for encouraging subordinates to continuously use problem-solving tools as part of their efforts to improve their skills and deal with bigger problems. This book focuses on leadership and the tools required to support a lean initiative. Understanding the basic and valuable tools of lean provides the foundation for leaders in support of their organization initiative. Topics in the book include a description of the eight wastes, organizational level process mapping, lean metrics, and developing a future position. The author includes a discussion and samples of basic lean tools such as Kanban, standard work, and visual management. The author also describes the tools each leader needs to be successful with in creating a culture of lean thinking, including the leader task board, the process performance board, and process walk.

Improving Schools Shaun Rawolle, Muriel Wells, Louise Paatsch, Russell Tytler, Coral Campbell, 2015-10-22. This unique book explores school improvement policy from its translation into national contexts and school networks to its implementation in leader and teacher practices in individual schools and classrooms within this network of schools and its impact on students' learning. It draws on multiple conceptual and theoretical resources to explore the complexities attached to a school improvement process in a network of schools in Australia. These conceptual and theoretical resources include discourse, practice representation, and network concepts common to both policy research as well as studies of leadership and classroom practice. They lead to a more detailed understanding of the intersections between educational policy and intervention processes and the complex reality of school processes and teaching practices. In the book, we trace the implementation of school improvement policies through its multiple phases, levels, and contexts. Our data collection and analysis methods draw on a variety of perspectives in the way different players perceive their roles and the nature of the initiative and the ways in which these intersect. The research findings are used to seek productive approaches to school improvement that combine policy integrity with local flexibility. The book contributes to the school improvement literature through its exploration of tensions between global and systemic settings and local practices and histories.
