**SOFSEM'99: Theory and Practice of Informatics** Jan Pavelka, Gerard Tel, Miroslav Bartosek, 2003-07-31 This year the SOFSEM conference is coming back to Milovy in Moravia to be held for the 26 time Although born as a local Czechoslovak event 25 years ago SOFSEM did not miss the opportunity offered in 1989 by the newly found freedom in our part of Europe and has evolved into a full edged international conference For all the changes however it has kept its generalist and multidisciplinary character The tracks of invited talks ranging from Trends in Theory to Software and Information Engineering attest to this Apart from the topics mentioned above SOFSEM 99 offers invited talks exploring core technologies talks tracing the path from data to knowledge and those describing a wide variety of applications

The rich collection of invited talks presents one traditional facet of SOFSEM that of a winter school in which IT researchers and professionals get an opportunity to see more of the large pasture of today's computing than just their favourite grazing corner To facilitate this purpose the prominent researchers delivering invited talks usually start with a broad overview of the state of the art in a wider area and then gradually focus on their particular subject **XML in Scientific Computing**

Constantine Pozrikidis, 2012-09-17 While the extensible markup language XML has received a great deal of attention in web programming and software engineering far less attention has been paid to XML in mainstream computational science and engineering Correcting this imbalance XML in Scientific Computing introduces XML to scientists and engineers in a way that illustrates the similarities and differences with traditional programming languages and suggests new ways of saving and sharing the results of scientific calculations The author discusses XML in the context of scientific computing demonstrates how the extensible stylesheet language XSL can be used to perform various calculations and explains how to create and navigate through XML documents using traditional languages such as Fortran C and MATLAB A suite of computer programs are available on the author's website *The Definitive Guide to SOA* David Schorow, Jeff Davies, Samrat Ray, David

Rieber, 2008-10-21 The Definitive Guide to SOA Oracle Service Bus Second Edition targets professional software developers and architects who know enterprise development but are new to enterprise service buses ESBs and service oriented architecture SOA development This is the first book to cover a practical approach to SOA using the BEA AquaLogic Service Bus tool And it's written from the source BEA Systems AquaLogic product lead Jeff Davies This book provides hands on information to developing SOA driven applications with ESBs as central components It also gives strategic guidance on SOA planning web service life cycle management administration of an ESB and security considerations Author Jeff Davies is careful to cut through theory and get straight to demonstrating successful use of the product **Guide to IBM PowerHA**

**Beginners** Wallace Jackson,2014-08-28 Anybody can start building multimedia apps for the Android platform and this book will show you how Now updated to include both Android 4.4 and the new Android L Android Apps for Absolute Beginners Third Edition takes you through the process of getting your first Android apps up and running using plain English and practical examples If you have a great idea for an Android app but have never programmed before then this book is for you This book cuts through the fog of jargon and mystery that surrounds Android apps development and gives you simple step by step instructions to get you started Teaches Android application development in language anyone can understand giving you the best possible start in Android development Provides simple step by step examples that make learning easy allowing you to pick up the concepts without fuss Offers clear code descriptions and layout so that you can get your apps running as soon as possible This book covers both Android 4.4 KitKat and Android L but is also backwards compatible to cover the previous Android releases since Android 1.5 *Tuscany SCA in Action* Simon Laws,Haleh Mahbod,Raymond Feng,Mark

Combella,2011-02-11 Apache Tuscany is a free open source project that helps users develop Service Oriented Architecture SOA solutions It provides a lightweight infrastructure that implements Service Component Architecture SCA and provides seamless integration with other technologies Tuscany in Action is a comprehensive hands on guide for developing enterprise applications using Apache Tuscany's lightweight SCA infrastructure The book uses practical examples to demonstrate how to develop applications with the open source Tuscany SCA Readers will learn how to model compose and manage applications Detailed explanations of how to use the various features of Apache Tuscany for protocol handling and developing components are presented Readers will also learn how to extend Apache Tuscany to support new programming environments and communication protocols Purchase of the print book comes with an offer of a free PDF ePub and Kindle eBook from Manning Also available is all code from the book *3D Geo-Information Sciences* Jiyeong Lee,Siyka Zlatanova,2008-10-24 In recent

years 3D geo information has become an important research area due to the increased complexity of tasks in many geo scientific applications such as sustainable urban planning and development civil engineering risk and disaster management and environmental monitoring Moreover a paradigm of cross application merging and integrating of 3D data is observed The problems and challenges facing today s 3D software generally application oriented focus almost exclusively on 3D data transportability issues the ability to use data originally developed in one modelling visualisation system in other and vice versa Tools for elaborated 3D analysis simulation and prediction are either missing or when available dedicated to specific tasks In order to respond to this increased demand a new type of system has to be developed A fully developed 3D geo information system should be able to manage 3D geometry and topology to integrate 3D geometry and thematic information to analyze both spatial and topological relationships and to present the data in a suitable form In addition to the simple geometry types like point line and polygon a large variety of parametric representations freeform curves and surfaces or sweep shapes have to be supported Approaches for seamless conversion between 3D raster and 3D vector representations should be available they should allow analysis of a representation most suitable for a specific application **Batch**

Oscar Corcho,2005 The ontology translation problem aka ontology interoperability problem appears when we decide to reuse

an ontology or part of an ontology with a tool or language that is different from those ones in which the ontology is available. If we force each ontology based system developer individually to commit to the task of translating and incorporating to their systems the ontologies that they need they will require a lot of effort and time to achieve their objective. This book presents two contributions to the current state of the art on ontology translation among languages and/or tools. The first contribution is a proposal for a new model for building and maintaining ontology translation systems. The second contribution characterises existing ontology translation approaches from the perspectives of semantic and pragmatic preservation that is consequence and intended meaning preservation respectively.

**Developing Semantic Web Services** H. Peter Alesso, Craig F. Smith, 2004-10-27. Developing Semantic Web Services is well informed about work on WS Web Services and the SemWeb. Semantic Web and in particular understands OWL S very well. Also the book fills a need that to my knowledge hasn't been met at all. David Martin, editor OWL S Coalition. The inventor of the World Wide Web, Tim Berners Lee, is also the originator of the next generation Web architecture, the Semantic Web. Currently his World Wide Web consortium W3C team works to develop, extend and standardize the Web's markup languages and tools. The objective of the Semantic Web Architecture is to provide a knowledge representation of linked data in order to allow machine processing on a global scale. The W3C has developed a new generation of open standard markup languages which are now poised to unleash the power, flexibility and above all logic of the next generation Web as well as open the door to the next generation of Web Services. There are many ways in which the two areas of Web Services and the Semantic Web could interact to lead to the further development of Semantic Web Services. Berners Lee has suggested that both of these technologies would benefit from integration that would combine the Semantic Web's meaningful content with Web Services business logic. Areas such as UDDI and WSDL are ideally suited to be implemented using Semantic Web technology. In addition, SOAP could use RDF payloads, remote RDF query and updates and interact with Semantic Web business rules engines, thereby laying the foundation for Semantic Web Services. This book presents the complete Language Pyramid of Web markup languages including Resource Description Framework, RDF, Web Ontology Language, OWL and OWL Services, OWL S along with examples and software demos. The source code for the Semantic Web Author and Integrated Development Environment for Semantic Markup Languages is available on CD-ROM with the book.

**Database and Expert Systems Applications** Mohamed Ibrahim, Josef Küng, Norman Revell, 2003-05-15. The Database and Expert Systems Applications DEXA conferences have established themselves as a platform for bringing together researchers and practitioners from various backgrounds and all regions of the world to exchange ideas, experiences and opinions in a friendly and stimulating environment. The papers presented at the conference represent recent developments in the field and important steps towards shaping the future of applied computer science and information systems. DEXA covers a broad field: all aspects of databases, knowledge based systems, knowledge management, web based systems, information systems related technologies and their applications. Once again there were a good number of

submissions out of 183 papers that were submitted the program committee selected 92 to be presented In the first year of this new millennium DEXA has come back to the United Kingdom following events in Vienna Berlin Valencia Prague Athens London Zurich Toulouse Vienna and Florence The past decade has seen several revolutionary developments one of which was the explosion of Internet related applications in the areas covered by DEXA developments in which DEXA has played a role and in which DEXA will continue to play a role in its second decade starting with this conference **PC Mag** ,2002-06-30

Ontological Engineering refers to the set of activities that concern the ontology development process the ontology life cycle the methods and methodologies for building ontologies and the tool suites and languages that support them During the last decade increasing attention has been focused on ontologies and Ontological Engineering Ontologies are now widely used in Knowledge Engineering Artificial Intelligence and Computer Science in applications related to knowledge management natural language processing e commerce intelligent integration information information retrieval integration of databases b informatics and education and in new emerging fields like the Semantic Web Primary goals of this book are to acquaint students researchers and developers of information systems with the basic concepts and major issues of Ontological Engineering as well as to make ontologies more understandable to those computer science engineers that integrate ontologies into their information systems We have paid special attention to the influence that ontologies have on the Semantic Web Pointers to the Semantic Web appear in all the chapters but specially in the chapter on ontology languages and tools *Core Java, Volume II* Cay S.
