

FUEL SUPPLY

HIGH-PRESSURE ELECTRONIC INJECTION SYSTEM (EDC 14)

General

The main characteristics of the high pressure electronic injection system are:

- high injection pressure available (1400 bar)
- these pressures can be modulated between 150bar up to the maximum operating pressure of 1400 bar irrespective of the speed of rotation and engine load
- capacity to operate at very high speeds (up to 6000 rpm)
- injection control precision (injection duration and amount)
- lower consumption
- lower emissions

The main functions of the system are basically as follows:

- checking fuel temperature
- checking engine coolant temperature
- checking amount of fuel injected
- checking idling speed
- cutting off fuel in idling phase
- checking cylinder balancing when idling
- checking anti-swing
- checking emissions at idling or acceleration
- checking exhaust gas recirculation (EGR, if present)
- checking top speed limit
- checking glow plug
- checking situation of air conditioning system (if any)
- checking auxiliary fuel pump
- checking position of cylinders
- checking main and pilot injection status
- checking closed cycle of injection pressure
- checking turbocharging pressure
- checking engine load

The EDC 14 system makes pre-injection (pilot injection) before the TDC with the advantage of decreasing the deviation of the pressure in the combustion chamber, lowering the noise level of combustion, which is typical of direct injection engines.

The control unit checks the amount of fuel injected, adjusting the fuel pressure according to the engine speed and load. The information is sent to the hydraulic accumulator, which stores the amount of fuel for the next injection.

- engine speed
- coolant temperature
- turbocharging pressure
- air temperature
- exhaust air quantity
- battery voltage
- boost pressure
- position of throttle pedal
