Zander,Jan B. F. van Erp,2015-07-27 What can we learn from spontaneously occurring brain and other physiological signals about an individual's cognitive and affective state and how can we make use of this information One line of research that is actively involved with this question is Passive Brain Computer Interfaces BCI To date most BCIs are aimed at assisting patients for whom brain signals could form an alternative output channel as opposed to more common human output channels like speech and moving the hands However brain signals possibly in combination with other physiological signals also form an output channel above and beyond the more usual ones they can potentially provide continuous online information about an individual's cognitive and affective state without the need of conscious or effortful communication The provided information could be used in a number of ways Examples include monitoring cognitive workload through EEG and skin conductance for adaptive automation or using ERPs in response to errors to correct for a behavioral response While Passive BCIs make use of online neuro physiological responses and close the interaction cycle between a user and a computer system neuro physiological responses can also be used in an offline fashion Examples of this include detecting amygdala responses for neuromarketing and measuring EEG and pupil dilation as indicators of mental effort for optimizing information systems The described field of applied neuro physiology can strongly benefit from high quality scientific studies that control for confounding factors and use proper comparison conditions Another area of relevance is ethics ranging from dubious product claims acceptance of the technology by the general public privacy of users to possible effects that these kinds of applications may have on society as a whole In this Research Topic we aimed to publish studies of the highest scientific quality that are directed towards applications that utilize spontaneously effortlessly generated neurophysiological signals brain and or other physiological signals reflecting cognitive or affective state We especially welcomed studies that describe specific real world applications demonstrating a significant benefit compared to standard applications We also invited original new kinds of proposed applications in this area as well as comprehensive review articles that point out what is and what is not possible according to scientific standards in this field Finally we welcomed manuscripts on the ethical issues that are involved Connected to the Research Topic was a workshop

held on June 6 during the Fifth International Brain Computer Interface Meeting June 3 7 2013 Asilomar California that brought together a diverse group of people who were working in this field We discussed the state of the art and formulated major challenges as reflected in the first paper of the Research Topic *Nutrients Intake and Hypertension* Francesco Fantin,2020-05-13 Hypertension is a major health problem worldwide increasing cardiovascular CV risk and mortality Together with pharmacological treatments non pharmacological approaches such as nutrient intake modifications play an important role in optimizing treatment A link has been demonstrated between hypertension and body weight as well as dietary habits The aim of this Special Issue is to improve the understanding of the relationships between some nutrients and hypertension and of the effects of different dietary approaches on hypertension regulation from different points of view

Cardiometabolic diseases are driven by both metabolic disorders obesity insulin resistance non alcoholic fatty liver diseases and atherosclerosis and chronic inflammation e g in diabetes hypertension and autoimmune diseases leading to coronary artery disease and heart failure The perivascular or pericardiac adipose tissue expansion affecting both the systemic and tissue compartment is favored in cardiometabolic disease development This adipose tissue is a major component of the cardiovascular system that is dysregulated during the consumption of fat enriched diets Additionally fat enriched diets profoundly impact the response of immune cells in specialized tissues as well as the activation and differentiation of tissue resident progenitors This results in both dysfunction and remodeling that is not limited to tissues but also to cell activity The fate of cardiovascular diseases associated with metabolic disorders promotes the imbalance in pro and anti inflammatory environments
