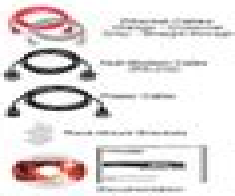
1 Checking the package contents

Check that the package contents are complete.

Connector	Type	Speed	Protocol	Description
Internal	RJ-45	10/100Base_T	Ethernet	Connection to the internal network.
External	RJ-45	10/100Base_T	Ethernet	Connection to the external.
DMZ	RJ-45	10/100Base_T	Ethernet	Optional connection to a DMZ network, or other FortiGate-200 with high availability (HA). For details, see the Documentation CD-ROM.
CONSOLE	DB-9	9600 bps	RS-232 serial	Optional connection to the management computer. Provides access to the command line interface (CLI).



2 Connecting the FortiGate-200

Connect the FortiGate-200 unit to power outlets and to the internal and external networks.

- Place the unit on a stable surface or mount it in a 19-inch rack. It requires 1.5 inches clearance (3.75 cm) on each side to allow for cooling.
- Make sure the power switch on the back of the unit is turned off before connecting the power and network cables.

3 Planning the configuration

Before configuring the FortiGate-200, you need to plan how to integrate the unit into your network. Your configuration plan is dependent upon the operating mode that you select: NAT/Route mode (the default) or Transparent mode.

NAT/Route mode

In NAT/Route mode, the FortiGate-200 is visible to the networks that it is connected to. All of its interfaces are on different subnets. You must configure the internal and external interfaces with IP addresses. Optionally, you can also configure the DMZ interface.

You would typically use NAT/Route mode when the FortiGate-200 is deployed as a gateway between private and public networks. In its default NAT/Route mode configuration, the unit functions as a firewall. Firewall policies control communications through the FortiGate-200 unit.

In NAT/Route mode, firewall policies can operate in NAT mode or in Route mode. In NAT mode, the FortiGate-200 performs network address translation before IP packets are sent to the destination network. In route mode, no translation takes place. By default, the unit has a single NAT mode policy that allows users on the internal network to securely access and download content from the Internet. No other traffic is possible until you have configured more policies.

Transparent mode

In Transparent mode, the FortiGate-200 is invisible to the network. All of its interfaces are on the same subnet. You only have to configure a management IP address so that you can make configuration changes.

You would typically use the FortiGate-200 in Transparent mode on a private network behind an existing firewall or behind a router. In its default Transparent mode configuration, the unit functions as a firewall. By default, the unit has a single firewall policy that allows users on the internal network segment to connect to the external network segment. No other traffic is possible until you have configured more policies.

You can connect up to three network segments to the FortiGate-200 unit to control traffic between these network segments.

Refer to the Documentation CD-ROM for information on how to control traffic, and how to configure HA, antivirus protection, Web content filtering, Spam filtering, intrusion prevention (IPS), and virtual private networking (VPN).

4 Choosing a configuration tool

Choose among two different tools to configure the FortiGate-200.

Web-based manager and Setup Wizard

Using the Setup Wizard you can add basic settings by stepping through the wizard pages and filling in the information required.

The FortiGate web-based manager is an easy-to-use management tool. Use it to configure the administrator password, interface addresses, the default gateway address, and the DNS server addresses.

Requirements:

- Ethernet connection between the FortiGate-200 and a management computer.
- Internet Explorer version 6.0 or higher on the management computer.

Command Line Interface (CLI)

The CLI is a full-featured management tool.

Use it to configure the administrator password, the interface addresses, the default gateway address, and the DNS server addresses. To configure advanced settings, see the Documentation CD-ROM.

Requirements:

- The RJ-45-serial connection between the FortiGate-200 and management computer.
- A terminal emulation application (HyperTerminal for Windows) on the management computer.
