**Guidebook on Preparing Airport Greenhouse Gas Emissions Inventories** Brian Y. Kim,2009 *Summary for Policymakers of the Synthesis Report of the IPCC Fourth Assessment Report* IPCC. Intergovernmental Panel on Climate Change,2007 The synthesis report is based on the assessment carried out by the three working groups of the IPCC It provides an integrated view of climate change as the final part of the IPCC s Fourth Assessment Report **Integrating Climate Change Actions into Local Development** Livia Bizikova,John Robinson,Stewart Cohen,2015-02-13 To date climate change adaptation and mitigation have been treated separately both in research and in the climate negotiations However a growing body of literature is now being developed that points to actual and potential synergies and trade offs between responses to climate change and sustainability This literature has evolved in a spontaneous way with diverse approaches and no common methodology to help practitioners explicitly plan for these synergies This special issue of the Climate Policy journal addresses this gap between scientific knowledge and practitioners needs by focussing on linkages between climate change and sustainable development at the level of conceptual framework and methods In particular the papers address in an integrated way local development options involving both adaptation and mitigation in order to promote resilience to climate change in human and natural systems The special issue provides policy and methodological guidelines for linking local development pathways with responses to climate change based on collaboration between local practitioners the public and scientists *Existential Politics* Jessica F. Green,2025-10-07 A new way to tackle the real politics of climate change through asset revaluation It s no secret that the Paris Agreement and voluntary efforts to address climate change are failing Governments have spent three decades crafting international rules to manage the climate crisis yet have made little progress on decarbonization In *Existential Politics* Jessica Green explains why this is unsurprising governments have misdiagnosed the political problem of climate change focusing relentlessly on measuring reporting and trading emissions This technical approach of managing tons ignores the ways that climate change and climate policy will revalue assets creating winners and losers Policies such as net zero carbon pricing and offsets all cater to the losers owners of fossil assets Ultimately Green contends climate change is a political problem Climate politics should be understood as existential creating conflicts that arise when some actors face the prospect of the devaluation or elimination of their assets or competition from the creation of new ones Fossil asset owners such as oil and gas companies and electric utilities stand to lose trillions in the energy transition Thus they are fighting to slow decarbonization and preserve the value of their assets Green asset owners who will be the basis of the decarbonized economy are fewer in number and relatively weak politically Green proposes using international tax finance and trade institutions to create new green asset owners and constrain fossil asset owners reducing their clout Domestic investments in green assets facilitated by global trade rules can build the political power of green asset

owners      *Climate Change* André Berger, Fedor Mesinger, Djordje Sijacki, 2012-04-25 Experts in climate and water sciences from Canada the United States Brazil Denmark Germany Belgium France Serbia and other European countries and the UNESCO gathered at the Serbian Academy of Sciences and Arts on the occasion of the 130th birthday anniversary of the geophysicist Milutin Milankovitch The collection of their presentations is opened by an update on the climate situation after the Fourth Assessment Report of the Intergovernmental Panel on Climate Change Further topics include various issues of paleoclimatology in particular as it helps reduce uncertainties from which prospects for climate change suffer ecohydrology and climate change at the watershed scale and regional climate models which are discussed in terms of both their improved modeling and their use in studies of a polynya in the Antarctica and expected changes in the Mediterranean region

Climate Change Impact on Agricultural Law Monika Anna Król, 2025-06-16 The modern world is faced with the challenge of feeding an exponentially growing population multiplied by the increasingly perceptible changes in climate the effects of which vary according to socio economic geographical and ecological conditions Climate change has been both a manifestation and an effect of the development of the biosphere which has influenced the evolution of our civilization It is necessary to postulate an intensification of research on the integration of environmental and climate change adaptation issues in legal and agricultural regulation The planned research will provide opportunity to verify the hypothesis that the regulation of environmental conditions for agriculture is evolving from specific solutions protecting the availability of basic natural resources for agricultural production to a more systemic approach in which agricultural inputs are treated as part of the biosphere and climate change adapted agriculture must meet the growing food needs of a growing world population

*Slope Safety Preparedness for Impact of Climate Change* Ken Ho, Suzanne Lacasse, Luciano Picarelli, 2017-06-01 Many countries are increasingly threatened by major landslide disasters and fatalities due to extreme weather events which have major implications for public safety and the sustainability of infrastructure and the built environment A further increase in such a trend could come from climate change This book helps to fill in the gap due to the fact that landslide hazards are commonly not covered under the policy debate on climate change The book highlights the importance of raising awareness to the challenges of landslide hazards due to climate impact It provides a holistic frame for understanding the key issues and new tools that could be used to assess and manage the landslide risks The book gathers contributions from 21 countries and regions in the form of national reports or summaries with respect to four key aspects a the methods used for evaluating changing weather and changing landslide patterns b the changing weather patterns c the changing landslide patterns and hazard scenarios d the applications to risk management and the formulation of adaptation measures Recommendations are made for enhanced preparedness and resilience Improved crisis management and areas for future work are suggested
