History of Macrobiotics (1715-2017) William Shurtleff; Akiko Aoyagi, 2017-09-30 The world's most comprehensive well documented and well illustrated book on this subject With extensive subject and geographical index 345 photographs and illustrations mostly color Free of charge in digital format on Google Books **Playing God** Nick Spencer, Hannah Waite, 2024-03-21 Could science one day defeat death What would alien contact mean for humanity Has medicine finally found a cure for sadness Will AI replace us For too long the science and religion debate has fixated on creation evolution cosmology miracles and quantum theory But this argues Nick Spencer and Hannah Waite is a mistake Religious belief has survived and thrived under many different models of the universe It was never intended to be a competing explanation for the science of any age Where science and religion really do come together sometimes furiously sometimes fruitfully is over the status and nature of the human And that has never been more important than today Whether it's the quest for immortality or the search for alien life the treatment of pandemics or animal personhood AI or mental health abortion or genetic editing science is making advances that are posing huge questions about what it means to be human whether we should change ourselves and how far we should play God These developments are only going to grow in significance *Playing God* brings readers up to date with the latest developments but also draws out their moral and religious dimensions In so doing it shows how the future of science and religion is inextricably tied up with the future of humanity *Adaptive Learning and the Human Condition* Jeffrey C. Levy, 2015-10-30 *Adaptive Learning and the Human Condition* presents the basic principles of classical Pavlovian and instrumental Skinnerian conditioning in a more coherent and expansive manner than is the case in other textbooks Learning is defined as an adaptive process through which individuals acquire the ability to

predict and where possible control the environment This overarching definition enables integration of traditional Pavlovian and Skinnerian principles and terminology and makes explicit why treatment of the learning process is essentially limited to these two historical research paradigms Pavlov developed a methodology for studying animals under circumstances where they could predict but not control sequences of environmental events Skinner studied animals under circumstances where their behavior had an effect upon environmental events Observational learning and symbolic communication i e spoken or written language are incorporated as indirect learning processes through which individuals can acquire the ability to predict or control This treatment creates a perspective within which it is possible to consider the fundamental nature of the learning process in understanding the human condition and in addressing significant individual and social concerns Examples of applications and issues not included in similar textbooks include The role of classical and instrumental conditioning in language acquisition The administration of rewards and punishers in Baumrind's parental styles as related to Kohlberg's stages of moral development Stone Age hunter gatherer and technologically advanced cultures How did we get from there to here Self control and self actualization While covering traditional technical and theoretical issues the book is written in a clear engaging style The narrative builds across chapters culminating in the treatment of applications and societal concerns of import and interest to students and faculty alike Upon completing this book readers should be able to explain the significance of human condition through adaptive learning present the basic principles of classical and instrumental conditioning and understand the significance of scientific research
