

Measurement of an Angle

Angle:

An angle is defined as the union of two non-collinear rays with some common end point. The rays are called arms of the angle and the common end point is known as vertex of the angle.

Clockwise or Anti-clockwise angle:

It is easy if we make an angle by rotating a ray from one position to another. When we form an angle in this way, the original position of the ray is called initial side and final position of the ray is called the terminal side of the angle. If the rotation of the ray is anti-clockwise or clockwise, the angle has positive or negative measure respectively.

Measurement of an angle in sexagesimal system (degree, minute and second)

Degree: We divide the circumference of a circle into 360 equal arcs. The angle subtended at the centre of the circle by one arc is called one degree and is denoted by 1° .

The symbols 1° , $1'$ and $1''$ are used to denote a degree, a minute and a second respectively.

Thus 60 seconds ($60''$) make one minute ($1'$)

60 minutes ($60'$) make one degree (1°)

90 degrees (90°) make one right angle.

360 degrees (360°) make 4 right angles.

An angle of 360° denotes a complete circle or one revolution. We use coordinate system to locate any angle to a standard position, where its initial side is the positive x-axis and its vertex is the origin.

Example: Locate

(a) -45° (b) 120°

(c) 45° (d) -270°

Solution: The angles are shown in figure.
