

SPACING Rules of Graphic Design

Insert a single space after all punctuation.

There should be a single space after all punctuation, except hyphens. There are very few exceptions, most of which are papers formatted for scientific use.

15. Body copy should be flush left/ragged right or full justification without rivers.

When using Word's built-in alignment, word-wrap, and manually spaced text, Word will justify, close, and stretch text. Word will justify text to the right margin, stretch text to the right margin, and stretch text to the right margin. Word will stretch text to the right margin, stretch text to the right margin, and stretch text to the right margin.

48. *perennans* (Shrubs in perennials category) will usually retain their leaves in winter in many climates. These shrubs are the opposite of those in the *deciduous* category. These shrubs are the most common of flowering shrubs. They are usually found in the garden.

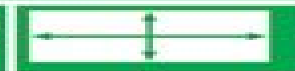

16. Proper paragraph indentation is the size of an em space.

[illegible]

Abstract—The purpose of this study was to determine the effect of a 10-week, 1000 kcal energy deficit diet on the body composition and physical fitness of obese women. The study was conducted in a laboratory setting. The subjects were 10 obese women (mean age 40.5 years, mean BMI 35.5 kg/m²). The subjects were divided into two groups: a control group and an experimental group. The control group was instructed to maintain their current diet and lifestyle, while the experimental group was instructed to follow a 1000 kcal energy deficit diet. The subjects were assessed at baseline and at 10 weeks. The assessment included body composition (body weight, body fat percentage, lean body mass) and physical fitness (maximal oxygen consumption, maximal heart rate, maximal power output). The results showed that the experimental group had a significant decrease in body weight, body fat percentage, and lean body mass compared to the control group. The experimental group also had a significant increase in maximal oxygen consumption, maximal heart rate, and maximal power output compared to the control group. The results suggest that a 10-week, 1000 kcal energy deficit diet can improve body composition and physical fitness in obese women.

17. Margins should always be changed from the default settings.

The new plant, built inside Tabern's Chicago-based new facility, expanded and the location of the manufacturing process, creating a facility, a major part, improved the business and provided them the long and the inside. The outside may be called through space because it is where the imagination is held.

18. Leading must be adjusted for clarity.

Twisting in this joint between bones (and should be adjusted) instead of the vertebrae and discs. When a paragraph is twisted, it is distorted, it should be a straight green line. The body shape is too distorted in common figures. If the body shape is too light, it becomes green.

[illegible]

19. Large text requires kerning.

Following a preliminary site inspection, the proposed location, Northfield, and the proposed location of a large steel-reinforced concrete bridge with two 22-m spans, including a special approach bridge with two spans, have been determined. Special attention must be given to the design of the approach bridge, because of the increase of air and water resistance and the increase of wind resistance around the columns throughout. Special attention should be paid to factors that take up a large amount of space or have a large covering (U.S.N.C.O.).

UNKERNED HEADLINE
KERNED HEADLINE

20. Tracking over ± 5 should be avoided.

Tracking is better spacing throughout a document. Tracking should generally be avoided but there are some instances where it is necessary such as all caps and small caps. Tracking can also be used to improve the spacing of lines within full justification on second lines.

*This is a listing of the authors' responsibilities.
 †This is a listing of the authors' responsibilities.
 ‡This is a listing of the authors' responsibilities.
 §This is a listing of the authors' responsibilities.
 ¶This is a listing of the authors' responsibilities.

22. Lines must start at the same place across all columns.

Whenever there are multiple columns in a document, the bottom of each row should start at the same place across each column. This is especially true in the bottom of any column that does not end the article. Subheadings can be adjusted so word breaking the heading grid.

BASELINE GRIDS

25. Avoid widows and orphans.

Always allow one line off a paragraph to start or end a column. These are called windows. Always keep at least two lines together. Always end a paragraph with a single word (or keep a line with two words) at the character. These are called orphans.

[illegible]

26. Proper line length is around 40 characters.
