

## Section 2

# Percentage and Calendar Functions

### Percentage Functions

The hp 12c platinum includes three keys for solving percentage problems: [%], [Δ%], and [%T]. You don't need to convert percentages to their decimal equivalents; this is done automatically when you press any of these keys. Thus, 4% need not be changed to 0.04; you key it in the way you see and say it: 4[%].

#### Percentages in RPN Mode

In RPN mode, to find the amount corresponding to a percentage of a number:

1. Key in the base number.
2. Press [ENTER].
3. Key in the percentage.
4. Press [%].

For example, to find 14% of \$300:

| Keystrokes<br>(RPN mode) | Display  |                                                                                                                                         |
|--------------------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------|
| 300                      | 300 .    | Keys in the base number.                                                                                                                |
| [ENTER]                  | 300 . 00 | Pressing [ENTER] separates the next number entered from the first number, just as when an ordinary arithmetic calculation is performed. |
| 14                       | 14 .     | Keys in the percentage.                                                                                                                 |
| [%]                      | 42 . 00  | Calculates the amount.                                                                                                                  |

If the base number is already in the display as a result of a previous calculation, you should not press [ENTER] before keying in the percentage — just as in a chain arithmetic calculation.
