The Shock and Vibration Digest ,1984 *Guidelines for the Use of Digital Imagery for Vegetation Mapping* Henry Lachowski,1996-09 A basic reference for those considering digital imagery particularly satellite imagery for vegetation mapping Contents using remote sensing and GIS for mapping vegetation remote sensors and remotely sensed data determining appropriate uses for satellite imagery defining the classification scheme collecting reference data assessing accuracy creating polygons project management the basic tour and case studies Important terms and ideas are introduced while showing the progression of key activities in the classification and mapping process **A User's Guide to a Steady-state Shallow-water Directional Spectral Wave Model** Jon M. Hubertz,1986 This report describes the formulation and use of a directional spectral wave model which can be used in shallow water The model simulates the transformation of a directional wave spectrum over an arbitrary two dimensional bathymetry allowing for the effects of atmospheric input bottom friction bottom percolation nonlinear wave interaction shoaling refraction and equilibrium range energy limitation The user has the option to include or exclude these sources and sink terms in any combination desired The formulation of each of these terms is summarized A description of the computer code is provided including a summary of the purpose of each subroutine and the format for data input and output of results A sample application is provided showing the transformation of a wave spectrum from deep to shallow water over a uniformly sloping bottom **Underwater Acoustic Modelling and Simulation, Third Edition** P.C. Etter,2003-12-08 Underwater Acoustic Modeling and Simulation examines the translation of our physical understanding of sound in the sea into mathematical models that can simulate acoustic propagation noise and reverberation in the ocean These models are used in a variety of research and operational applications to predict and diagnose the performance of complex sonar systems operating in the undersea environment Previous editions of the book have provided invaluable guidance to sonar technologists acoustical oceanographers and applied mathematicians in the selection and application of underwater acoustic models Now that simulation is fast becoming an accurate efficient and economical alternative to field testing and at sea training this new edition will also provide useful guidance to systems engineers and operations analysts interested in simulating sonar performance Guidelines for selecting and using available propagation noise and reverberation models are highlighted Specific examples of each type of model are discussed to illustrate model formulations assumptions and algorithm efficiency Instructive case studies demonstrate applications in sonar simulation **Guidelines for the Use of Digital Imagery for Vegetation Mapping** ,1996 **The Shock and Vibration Digest** ,1984 **Software Maintenance - A Management Perspective** Phaneendra Nath Vellanky,2007-10-23 Computer systems play an important role in our society Software drives those systems Massive investments of time and resources are made in developing and implementing these systems Maintenance is inevitable It is hard and costly Considerable resources are required to keep the systems active and dependable We cannot maintain software unless maintainability characters are

built into the products and processes There is an urgent need to reinforce software development practices based on quality and reliability principles Though maintenance is a mini development lifecycle it has its own problems Maintenance issues need corresponding tools and techniques to address them Software professionals are key players in maintenance While development is an art and science maintenance is a craft We need to develop maintenance personnel to master this craft Technology impact is very high in systems world today We can no longer conduct business in the way we did before That calls for reengineering systems and software Even reengineered software needs maintenance soon after its implementation We have to take business knowledge procedures and data into the newly reengineered world Software maintenance people can play an important role in this migration process Software technology is moving into global and distributed networking environments Client server systems and object orientation are on their way Massively parallel processing systems and networking resources are changing database services into corporate data warehouses Software engineering environments rapid application development tools are changing the way we used to develop and maintain software Software maintenance is moving from code maintenance to design maintenance even onto specification maintenance Modifications today are made at specification level regenerating the software components testing and integrating them with the system Eventually software maintenance has to manage the evolution and evolutionary characteristics of software systems Software professionals have to maintain not only the software but the momentum of change in systems and software In this study we observe various issues tools and techniques and the emerging trends in software technology with particular reference to maintenance We are not searching for specific solutions We are identifying issues and finding ways to manage them live with them and control their negative impact
