Journal Of Environmental Polymer Degradation Impact Factor:

Journal of Environmental Polymer Degradation, 1998 *Environmental Impact of Polymers* Thierry Hamaide, Rémi Deterre, Jean-François Feller, 2014-08-08 This text addresses the common negative perception of polymer materials on the environment with a thorough analysis of what really occurs when industry and academia collaborate to find environmental solutions The book examines the environmental and social effects of polymer materials and explains methods of quantifying environmental performance With an emphasis on the importance of education the authors stress the importance of awareness and activity in negating polymers environmental impact Insights In Biomaterials 2022 / 2023 - Novel Developments, Current Challenges, and Future Perspectives Hasan Uludag, Yunbing Wang, Nihal Engin Vrana, Candan Tamerler, Chandra Kothapalli, Milana C. Vasudev, 2024-03-04 **Waste Management and the Environment X J.** Casares, H. Itoh, M. Lega, 2020-08-25 Waste Management is one of the key problems of modern society due to the ever expanding volume and complexity of discarded domestic and industrial waste Society is increasingly aware of the need to establish better practices and safer solutions for waste disposal This requires further investigation into disposal methods and recycling as well as new technologies to monitor landfills industrial mining wastes and chemical and nuclear repositories This creates a need for more research on current disposal methods such as landfills incineration chemical and effluent treatment as well as recycling clean technologies waste monitoring public and corporate awareness and general education Unfortunately many of the policies adopted in the past were aimed at short term solutions without due regard to the long term implications on health and the environment leading in many cases to the need to take difficult and expensive remedial action The desired direction of Waste Management is towards sustainable strategies The approach which has emerged as the most promising has been called 4Rs where reduction reuse recycling and recovery are seen as the best actions This largely decreases the volume of waste that needs final disposal Recovery refers to the establishment of two new classifications those of Secondary Raw Materials SRM and of Refuse Derived Fuel RDF They both relate to useful products obtained from waste and make a shift from the mere recycle or reuse mostly seen as a way to reduce dumping to the valuable employment of such matter within the production cycle Another aspect of this revolution is happening subtly and gradually by people buying waste particularly eWaste and some types of plastic the so called technical waste This is happening due to the strong demand and high price of certain new materials and the possibility of sorting out waste in developing regions of the world As a result a market in Secondary Raw Materials SRM has developed Covering various areas under the topic of Waste management this volume contains a selection of papers presented at the 10th International Conference on Waste Management and the Environment *Biodegradable Polymers* Margarita del Rosario Salazar, Jose Fernando Solanilla Duque, Aide Saenz-Galindo, Raul Rodriguez-Herrera, 2023-03-16 Basic concepts on biodegradable biopolymer science are presented in this book as well as techniques analyses standards and essential criteria for the characterization of biodegradable materials

obtained from biopolymers The development and innovation of products and processes considering the environment are highlighted in this book All of the applications described have been discussed from the point of view of sustainability Additionally this book highlights that biodegradability is a great burden when trying to replace modify and or design existing products and processes that are highly polluting Finally the present book concludes with reflections on the development of biopolymers in different areas and some of their consequences depending on their biodegradability

Environmental Footprint of Bioplastic Additives Babafemi Raphael Babaniyi, Sesan Abiodun Aransiola, Gabriel Gbenga Babaniyi, Naga Raju Maddela, 2025-10-21 Plastics derived from renewable sources such as biomass or animal based materials offer an eco friendly alternative to traditional petroleum based plastics These bioplastics being biobased and biodegradable hold great promise in reducing reliance on fossil fuels and mitigating plastic pollution However additives play a crucial role in enhancing the properties of bioplastics improving flexibility durability and overall performance While some additives facilitate biodegradation others such as phthalates bisphenol A BPA and brominated compounds can release harmful substances upon breakdown posing risks to soil and water quality This book offers a comprehensive understanding of bioplastic compositions degradation processes and the environmental impact of various additives Through detailed life cycle analyses it assesses how bioplastic additives compare to conventional plastic additives in terms of sustainability and ecological impact The book also addresses the challenges of managing bioplastic waste including recycling limitations and the lack of standardized disposal methods

Key Features In depth analysis of bioplastic compositions degradation processes and additive functions Comparative life cycle assessment of bioplastic and conventional plastic additives Examination of the environmental impact of bioplastic additives on soil wildlife and water quality Discussion on innovative waste management and recycling strategies for bioplastics Exploration of policy frameworks public awareness initiatives and case studies promoting sustainable bioplastic usage Designed to address the knowledge gap in bioplastic additive research this book is an essential resource for researchers policymakers industry professionals and environmental enthusiasts It bridges the gap between scientific understanding and practical implementation empowering stakeholders to make informed decisions and contribute to sustainable bioplastic waste management

Biocomposites and the Circular Economy Abbas S Milani, Mahdi Takaffoli, 2025-04-02 Biocomposites and the Circular Economy provides up to date research results and insights from a multidisciplinary group of researchers across the globe Topics cover the full lifecycle of biocomposites featuring detailed research reports case studies and comprehensive literature reviews The book explores various aspects of these materials including their synthesis and processing environmental and techno economic assessments supply chain modeling and decision making frameworks tailored to sustainable practices Literature review chapters deliver thorough insights into emerging topics Additionally all research and case study chapters begin with an overview of related literature guiding readers through state of the art research and highlighting opportunities for further development The book is a valuable

reference resource for academic and industrial researchers materials scientists and engineers Industrial R D and manufacturers working in the research development and manufacturing of biocomposites in a broad range of application fields Covers the full cycle of biocomposite products including early research and development phases design engineering for specific applications and end of life management of these materials Presents both detailed reports of case studies and research projects on biocomposites as well as comprehensive literature reviews of emerging topics Focuses on the use of waste and recovered feedstock in the manufacturing of biocomposites as they relate to the circular economy Features industry based projects related to biocomposites helping the reader grasp practical knowledge about the design and development of biocomposites for real world applications Includes supply chain management techno economic assessments and updates on the fillers and reinforcing constituents used in the manufacturing of biocomposites

Microplastics Pollution Vijay Kumar,Pardeep Singh,Shailender Kumar,Ankit Kumar Singh,2025-10-25 The fragments of the plastics smaller than 5 mm are called microplastics These are widely distributed contaminants in aquatic terrestrial and aerial environments Microplastics are released into the environment due to the extensive use of plastics and microplastics for various purposes such as mulching commercial organic fertiliser and cosmetics In addition microplastics are also released from industries like polymer textiles and transport industries The mismanagement of plastic garbage also builds up in the environment and releases microplastics Microplastics not only act as contaminants but also act as vectors for numerous harmful chemical and biological pollutants such as heavy metals persistent organic pollutants and pathogens which have been linked to detrimental effects on the health of aquatic and terrestrial ecosystems The present book will discuss the research carried out by the great scientific community working in the field of microplastic pollution in the soil air and water as well as their potential remediation strategies The readers would be able to find a loop between the significant sources of microplastic pollution their impact on the biosphere and solutions in one place

Micro and Nanoplastics in Aquatic Environment Ashok Vaseashta,Maris Klavins,Olena Stabnikova,2025-09-02 Over the past century and a half advancements in polymer science encompassing both natural and synthetic materials have led to the development of strong lightweight and highly flexible polymers Their remarkable diversity and versatility make them indispensable in modern life However the escalating accumulation of fragmented plastic waste in the environment has become a pressing global concern Micro and nanoplastics MNPs which tend to accumulate at the air water interface pose potential safety and security risks by serving as carriers for viruses Currently there is limited research on the effects of MNP consumption in both human and non human models This book provides a comprehensive examination of the challenges associated with MNPs their environmental monitoring and management strategies aimed at risk assessment and mitigation It explores emerging techniques for identifying collecting and mitigating MNP contamination in aquatic ecosystems Additionally it delves into the toxicokinetics fate and transport of MNPs including recent findings on their movement within the human body A notable development in

this field is the application of metamaterials for detecting and degrading organic pollutants and microplastics through photocatalysis From a policy perspective refining international standards encompassing product labeling responsible usage and strategies for recycling upcycling and sustainable disposal remains imperative for mitigating the long term impact of MNP pollution *Energy from Waste* Ram K. Gupta,Tuan Anh Nguyen,2022-03-28 Conversion of waste into value added products such as energy transforms a potential environmental problem into a sustainable solution *Energy from Waste Production and Storage* focuses on the conversion of waste from various sources for use in energy production and storage applications It provides the state of the art in developing advanced materials and chemicals for energy applications using wastes and discusses the various treatment processes and technologies Covers synthesis of usable materials from various types of waste and their application in energy production and storage Presents an overview and applications of wastes for green energy production and storage Provides fundamentals of electrochemical behavior and understanding of energy devices such as fuel cells batteries supercapacitors and solar cells Elaborates on advanced technologies used to convert waste into green biochemical energy This work provides new direction to scientists researchers and students in materials and chemical engineering and related subjects seeking to sustainable solutions to energy production and waste management
