Barnsley, Paul A. Longley, 2003-09-02 One of the key geographical developments over the last two centuries has been that of urbanisation In recent years this has exploded globally particularly in developing countries It is essential for governments planners and researchers in geography and allied fields to understand this process and the main way of being able to do this is to accurately map these changes The main method of this mapping is Remote Sensing This up to date analysis of the area looks at a wide range of methodologies currently being used to produce and analyse remotely sensed data of urban areas The authors examine the various techniques used to extract information from digital multispectral images of urban areas Donnay and Barnsley then go on to look at the identification of urban forms the delineation of agglomerations and the development of urban morphology considering the analysis of integrated data sets and surface models and going on to look at the estimation of human population levels **Facial Multi-characteristics And Applications** Bob Zhang, Qijun Zhao, David Zhang, 2018-11-19 What features or information can we observe from a face and how can these information help us to understand the person concerned in terms of their well being and what can we learn about and from each given feature This book answers these questions by first dividing a face s multiple characteristics into two main categories original or

physiological features and features that change over a lifetime The first category original features may be further divided into two sub classes features special or unique to an individual and features common to a particular group The second changed features can also be subdivided into two groups features altered due to disease or features altered by other external factors From these four sub categories four different applications facial identification using original and special features beauty analysis using original common features facial diagnosis by disease changed features and expression recognition through affect changed features are identified The book will benefit researchers professionals and graduate students working in the field of computer vision pattern recognition security clinical practice and beauty analysis and will also be useful for interdisciplinary research Books in Print Supplement ,1979
