Curricular Program Implementation in the Context of Randomized Field Trials Gloria Isabel Miller, 2011 Abstract curricular program implementation in the context of randomized field trials Gloria Isabel Miller This study examined three cases of commercially available curricular program implementations to determine if a unified approach to measuring the level of implementation was possible proof of concept Further the study investigated whether the level of curriculum and implementation plan specificity made a difference to the strength of implementation achieved in classrooms and described the implementation evolution in different contexts The study sample consists of a total of 163 teachers in eight school districts across the United States In each case teachers were randomly assigned to using the curricular innovation or their currently used materials and processes The three cases HS Math NewScience and MathIntervention were purposely chosen to represent three different points of curricular and implementation specificity and two different subject areas math and science Each case features a commercially available program that also had opportunities for teachers to use electronic technology to enhance their learning or to engage their students The cases represent differing student grade levels The cases are different enough to provide a range that exercises the measurement techniques introduced in this study so results can begin to generalize across curricular programs and grades However the cases are similar enough in research design instrumentation and data collection methods to make them comparable A key contribution of this investigation is the creation of a framework to measure the level of implementation the extent to which the teacher and students display the actions behaviors and interactions expected by using the innovation The unified conceptual framework arrived at by using an Activity Theory perspective together with the analytical methods employed provide a way to view the rich complex interaction of implementation as a system with the larger system of the school organization Data from the analysis revealed that variations in the level of implementation were no different regardless of the level of specificity A strong finding of this work is that implementation evolves slowly even when the curricular program is scripted and coaching support is provided to teachers The paper concludes with implications for policy and future research Gateways to Algebra and Geometry, an Integrated Approach McDougal Littell Incorporated, 1997-01-01 Geometry Connections John K. Beem, 2006 This handbook presents a review of college level geometry designed to equip middle grade mathematics teachers with the skills needed for teaching

NCTM National Council of Teachers of Mathematics Standards based curricula Contains geometry which middle school mathematics teachers will actually have to teach as well as additional material to deepen future teachers knowledge and understanding of geometry Includes a variety of activities designed to deepen the connections between the geometry students are studying now and the geometry they will teach The Classification of Quadrilaterals Zalman

Usiskin,2008-01-01 This monograph reports on an analysis of a small part of the mathematics curriculum the definitions given to quadrilaterals This kind of research which we call micro curricular analysis is often undertaken by those who create curriculum but it is not usually done systematically and it is rarely published Many terms in mathematics education can be found to have different definitions in mathematics books Among these are natural number parallel lines and congruent triangles trapezoid and isosceles trapezoid the formal definitions of the trigonometric functions and absolute value and implicit definitions of the arithmetic operations addition subtraction multiplication and division Yet many teachers and students do not realize there is a choice of definitions for mathematical terms And even those who realize there is a choice may not know who decides which definition of any mathematical term is better and under what criteria Finally rarely are the mathematical implications of various choices discussed As a result many students misuse and otherwise do not understand the role of definition in mathematics We have chosen in this monograph to examine a bit of mathematics for its definitions the quadrilaterals We do so because there is some disagreement in the definitions and consequently in the ways in which quadrilaterals are classified and relate to each other The issues underlying these differences have engaged students teachers mathematics educators and mathematicians There have been several articles and a number of essays on the definitions and classification of quadrilaterals But primarily we chose this specific area of definition in mathematics because it demonstrates how broad mathematical issues revolving around definitions become reflected in curricular materials While we were undertaking this research we found that the area of quadrilaterals supplied grist for broader and richer discussions than we had first anticipated The intended audience includes curriculum developers researchers teachers teacher trainers and anyone interested in language and its use Geometry Worked-Out Solutions Key McDougal Littell,2007-02-28

Improving Instruction in Geometry and Measurement Margaret Schwan Smith,Edward A. Silver,Mary Kay Stein,2005-01-01 Helping students develop an understanding of important mathematical ideas is a persistent challenge for

teachers In this book one of a three volume set well known mathematics educators Margaret Smith Edward A Silver and Mary Kay Stein provide teachers of mathematics the support they need to improve their instruction They focus on ways to engage upper elementary middle school and high school students in thinking reasoning and problem solving to build their mathematics understanding and proficiency The content focus of Volume One is rational numbers and proportionality Using materials that were developed under the NSF funded COMET Cases of Mathematics to Enhance Teaching program each volume in the set features cases from urban middle school classrooms with ethnically racially and linguistically diverse student populations Each case illustrates an instructional episode in the classroom of a teacher who is implementing standards based instruction the teachers perspective including their thoughts and actions as they interact with students and with key aspects of mathematical content cognitively challenging mathematics activities that are built around samples of authentic classroom practice and facilitation chapters to help professional developers teach the cases including specific guidelines for facilitating discussions and suggestions for connecting the ideas presented in the cases to a teacher s own practice As a complete set this resource provides a basis on which to build a comprehensive professional development program to improve mathematics instruction and student learning

Automated Deduction in Geometry Francisco Botana,Tomas Recio,2007-12-06 The papers in this volume show the lively variety of topics and methods in automated deduction in geometry and their applicability to different branches of mathematics as well as to other sciences and technologies The book is made up of the thoroughly refereed post proceedings of the 6th International Workshop on Automated Deduction in Geometry ADG 2006 held at Pontevedra Spain in 2006 There are a total of 13 revised full papers selected from a number of submissions
