Chapter 15 Two-Lane Highways

Step 1: Input Data

- Collect data necessary to evaluate the desired two-lane highway segment.
- Site-specific data is better than default values.

Step 2: Estimate the FFS

- FFS should be measured if possible for the segment, preferably by direct field measurement. If not, a sampling method may be used. If field data are not available, FFS may be indirectly estimated.
- FFS can vary greatly between two-lane highway facilities and helps the analyst understand drivers' behavior on that segment. This step takes into account the effect of the geometry on driver behavior.

Step 3: Demand Adjustment for ATS

- Adjusts the demand volume in the analysis direction into a flow rate (in veh/hr) to better represent traffic, which will be used to calculate ATS.
- This step takes into account the effects of terrain and heavy vehicles on the traffic stream. It also adjusts the volume to represent the peak hour.

Step 4: Estimate the ATS

- Calculate the ATS for the analysis segment using Equation 15-6.
- The ATS adjusts the FFS to account for the effect of no passing zones and the opposing traffic flow rate on traffic traveling in the analysis direction.

Step 5: Demand Adjustment for PTSF

- Adjusts the demand volume in the analysis direction into a flow rate (in veh/hr) to better represent traffic, which will be used to calculate PTSF.
- As with the adjustment for ATS, this step accounts for the effects of grade and heavy vehicles on the traffic stream, as well as adjusting the flow rate to the peak hour.

Step 6: Estimate the PTSF

- Calculate the percentage of time a vehicle traveling in the analysis direction would be unable to pass and form a platoon behind another vehicle traveling slower.
- This step attempts to quantify the difficulty of a vehicle traveling at a higher rate of speed to pass a slower-moving vehicle on the road segment. As the percentage increases, platoons of vehicles grow longer and operational conditions degrade.

Step 7: Estimate the PFFS

- For Class III facilities only, this provides another measure of operational performance.
- This step compares the actual average speed of travel versus the free-flow speed to estimate how the traffic conditions have affected how fast people are able to travel.

Intersections Control and Safety Antonio Pratelli, 2013-05-22 Starting off a new series on Transport Systems and Traffic Engineering the book aims to help bridge the gap between research and practice encouraging a critical dialogue in different specific subjects spanning innovation development and technology transfer Those who offer innovation often do not meet the immediate needs of practitioners especially in the traditional field of civil engineering Still the adequate diffusion of research results and wisdom derived from practical experience are crucial to both theoretical underpinnings and technical applications The papers forming this book are devoted to intersection control and safety and have been selected bearing in mind the criteria stated above That is these

papers provide both scholarly contribution as well as vision for application As a general rule about one third of all highway crashes happen at intersections This rule holds for many different countries Intersection crashes also represent a significant portion of serious injury crashes and by right are receiving considerable attention from researchers and practitioners alike This book is therefore devoted to relevant safety aspects of road intersections and innovative features in design and operations that may address the intersection crash problem The thirteen papers are more or less equally devoted to roundabouts and signals These papers cover many of the most recent and emerging issues related to intersection control and safety Topics range from design details to driver perception from pedestrians behaviour to signal timing and from capacity models to red light running The book will be useful for those wishing to expand their knowledge of this ever important subject area

Nodes in Transport Networks - Research, Data Analysis and Modelling

Elżbieta Macioszek, Nan Kang, Grzegorz Sierpiński, 2020-01-06 The publication delivers numerous valuable guidelines, particularly useful when making decisions related to the subject matter of road and rail nodes located in dense transport networks. The knowledge displayed while discussing practical examples, as well as the decision-making support systems described in the publication, will certainly attract the interest of those who daily face the challenge of seeking solutions to the operational and functional problems of transport nodes in contemporary transport networks and systems. This publication is dedicated to local authorities involved in planning and preparation of development strategies for specific transport-related issues in both urban and regional areas, as well as to representatives of business and industry, being those who participate directly in the implementation of traffic engineering solutions. The guidelines provided in individual chapters of the publication will make it possible to address the given problem in an advanced manner and simplify the choice of appropriate strategies, including those related to synchronisation of road traffic streams, improving the capacity, road traffic safety, analysis, evaluation of changes in drivers' behaviour on account of introducing countdown timers at signal-controlled intersections, using UAV data, the influence of the type of traffic organisation on the behaviour of pedestrians at tram line crossings. On the other hand, since the publication also concerns the new approach to theoretical models, including potential places of integration of public transport with the railway network or the speed adviser for pedestrians enabling them to choose the optimal path at signal-controlled intersections, it should also attract the attention of researchers and scientists studying this body of problems. The publication entitled *Nodes in transport networks: research, data analysis and modelling* contains selected papers submitted to and presented at the 16th Transport Systems Theory and Practice Scientific and

Martin Rogers, Bernard Enright, 2016-05-31 The repair, renovation and replacement of highway infrastructure along with the provision of new highways is a core element of civil engineering so this book covers basic theory and practice in sufficient depth to provide a solid grounding to students of civil engineering and trainee practitioners. Moves in a logical sequence from the planning and economic justification for a highway through the geometric design and traffic analysis of highway links and intersections to the design and maintenance of both flexible and rigid pavements. Covers geometric alignment of highways, junction and pavement design, structural design and pavement maintenance. Includes detailed discussions of traffic analysis and the economic appraisal of projects. Makes frequent reference to the Department of Transport's Design Manual for Roads and Bridges. Places the provision of roads and motorways in context by introducing the economic, political, social and administrative dimensions of the subject. **International Encyclopedia of Transportation** ,2021-05-13 In an increasingly globalised world despite reductions in costs and time, transportation has become even more important as a facilitator of economic and human interaction. This is reflected in technical advances in transportation systems, increasing interest in how transportation interacts with society and the need to provide novel approaches to understanding its impacts. This has become particularly acute with the impact that Covid-19 has had on transportation across the world at local, national and international levels. Encyclopedia of Transportation Seven Volume Set containing almost 600 articles brings a cross-cutting and integrated approach to all aspects of transportation from a variety of interdisciplinary fields including engineering, operations, research, economics, geography and sociology in order to understand the changes taking place. Emphasising the interaction between these different aspects of research, it offers new solutions to modern-day problems related to transportation. Each of its nine sections is based around familiar themes but brings together the views of experts from different disciplinary perspectives. Each section is edited by a subject expert who has commissioned articles from a range of authors representing different disciplines, different parts of the world and different social perspectives. The nine sections are structured around the following themes: Transport Modes; Freight Transport and Logistics; Transport Safety and Security; Transport Economics; Traffic Management; Transport Modelling and Data Management; Transport Policy and Planning; Transport Psychology; Sustainability and Health Issues in Transportation. Some articles provide a technical introduction to a topic whilst others provide a bridge between topics or a more future-oriented view of new research areas or challenges. The end result is a reference work that offers researchers and practitioners new approaches, new ways of thinking and novel solutions to problems. All encompassing and expertly authored, this outstanding reference work will be essential reading for all students and researchers interested in transportation and its global impact in what is a very uncertain world.
