Inc,1986 *The JOSHUA (J80) System Programmer's Manual* ,1993 The JOSHUA system routines JS routines can be used to
manage a JOSHUA data base and execute JOSHUA modules on VAX VMS and IBM MVS computer systems This manual
provides instructions for using the JS routines and information about the internal data structures and logic used by the
routines It is intended for use primarily by JOSHUA systems programmers however advanced applications programmers may
also find it useful The JS routines are as far as possible written in ANSI FORTRAN 77 so that they are easily maintainable and
easily portable to different computer systems Nevertheless the JOSHUA system provides features that are not available in
ANSI FORTRAN 77 notably dynamic module execution and a data base of named variable length unformatted records so
some parts of the routines are coded in nonstandard FORTRAN or assembler as a last resort In most cases the nonstandard
sections of code are different for each computer system To make it easy for programmers using the JS routines to avoid
naming conflicts the JS routines and common block all have six character names that begin with the characters open_quotes
JS close_quotes Before using this manual one should be familiar with the JOSHUA system as described in open_quotes The
