

Example of a Well-Written Research Proposal: Basic Science Project

Please note: The following proposal was written by a student who was accepted into the research program for summer 2005. The format is slightly different than what is required for the summer 2006 application.

B. Project Description

a. Project Title

Metabolic Effects of Amyloidogenic κ 1 Light Chain Internalization and Localization

b. Description/Goals of Project

Amyloidosis is a family of diseases characterized by aggregations of misfolded proteins throughout the body. Some forms of amyloidosis include Alzheimer's disease, Parkinson's disease and systemic (AL) light chain amyloidosis. Investigators of the mechanisms of amyloidosis are just now beginning to get a brief glimpse of how the diseases begin and progress in the human body. Amyloid fibrils appear in different tissues throughout the body, including the heart, which is the most commonly affected organ in AL amyloidosis. Since AL fibrils are believed to be composed of fragments of immunoglobulin light chain proteins that are found natively in the body, it is hypothesized the immune system produces excess light chain which is internalized by cells, processed, and then exported to the extracellular milieu where the fibrils form by an unclear mechanism. The current thrust of research in the Trinkaus-Randall Lab is to understand how the light chain is internalized and processed within the cells before it is exported. Preliminary results indicate the light chain is cycled between the cell and the extracellular environment. More results also suggest subcellular localization patterns, including the nucleus and perhaps the Golgi apparatus. Further curious data have suggested the light chain is actively mobilized within the cell, perhaps along cytoskeletal structures. The primary goal of my project will be to further elucidate specific subcellular localization patterns of light chain and to begin to understand whether light chain affects cell metabolism by studying changes in gene transcription.

c. Hypotheses being tested

- i. 00131 κ 1 light chain localizes to the Golgi apparatus.
- ii. 00131 κ 1 light chain localizes to various structures within the endosomal and lysosomal pathways.
- iii. 00131 κ 1 light chain modifies gene transcription as determined by histone acetyl transferase assays.
- iv. 00131 κ 1 light chain is transported along actin fibers and/or microtubules
- v. 00131 κ 1 light chain localizes to the nucleus.

d. My Role

Because of previous work experience using a confocal microscope, Dr. Trinkaus-Randall has allowed me to perform my work primarily by studying the light chain using microscopy. My role will be to assist in culturing primary rat cardiac fibroblasts that I will treat with light chain. The cells, once treated with fluorescently-tagged light chain may be fixed and further stained to visualize other structures via fluorescence, such as Golgi or actin. I have also developed an imaging protocol to obtain movies of live cells that have been treated with fluorescent light chain in order to develop a kinetic model of movement of light chain throughout the cell. I will also work closely with the technician and MD/PhD student who are also actively involved with amyloid research in the lab in order to develop a global picture of internalization, localization and any metabolic changes elicited by light chain.

Writing Research Proposals for Social Sciences and Humanities in a Higher Education Context George

Damaskinidis, Anastasia Christodoulou, 2019-03-08 A research proposal is a plan that a candidate submits to gain approval for post graduate research Although it is a typical requirement for any research in higher education it has failed to receive the attention it deserves from the academic community as a procedure of systematic teaching and learning This book provides a support framework with step by step guidance about what constitutes a good research proposal and what can be done to maximize one's chances of writing a successful application It also presents advice and practical activities to enhance skill development and shows how success is within reach if we are willing to face our flaws and grasp how to use the available information productively and persuasively *How to Write and Publish a Scientific Paper* Robert A Day, Barbara

Technical ideas may be solid or even groundbreaking but if these ideas cannot be clearly communicated reviewers of technical documents e.g proposals for research funding articles submitted to scientific journals and business plans to commercialize technology are likely to reject the argument for advancing these ideas The problem is that many engineers and scientists entirely comfortable with the logic and principles of mathematics and science treat writing as if it possesses none of these attributes The absence of a systematic framework for writing often results in sentences that are difficult to follow or arguments that leave reviewers scratching their heads This book fixes that problem by presenting a scientific approach to writing that mirrors the sensibilities of scientists and engineers an approach based on an easily discernable set of principles Rather than merely stating rules for English grammar and composition this book explains the reasons behind these rules and shows that good reasons can guide every writing decision This resource is also well suited for the growing number of scientists and engineers in the U S and elsewhere who speak English as a second language as well as for anyone else who just wants to be understood **Writing Successful Science Proposals, Second Edition** Andrew J.
