## Student Exploration: Human Evolution - Skull Analysis

**Directions:** Follow the instructions to go through the simulation. Respond to the questions and prompts in the orange boxes.

**Vocabulary:** bipedal, canine, cranial capacity, cranium, evolve, foramen magnum, hominid, hominin, index, maxilla, orbit, palate, skull

**Prior Knowledge Questions** (Do these BEFORE using the Gizmo.)

1. Label one of the **skulls** below as human and the other as a chimpanzee skull.

Human

Chimpanzee

2. What features did you use to identify which skull was human and which was chimpanzee?

The chimpanzee's skull is shaped differently and the jaw comes out more.

### **Gizmo Warm-up**

In 1924, a fossilized skull that looked very similar to a chimp skull was discovered. But the skull most definitely did not belong to a chimp. The location of the **foramen magnum**—a hole in the skull where the spinal cord exits—indicated that the individual was **bipedal**, or walked on two legs. This fossil was some of the earliest evidence of human evolution.

Using the *Human Evolution – Skull Analysis* Gizmo, you will discover some of the ways that skulls can be used to learn about human evolution. Start by comparing two modern **hominids**: a human and a chimpanzee.

1. Examine the **Front view** of the *Homo sapiens* (modern human) skull. Then, use the **Select skull** menu to examine the same view of the *Pan troglodytes* (chimp) skull.

How do the skulls compare?

The human skull has a smaller jaw, smaller teeth, and larger forehead than the chimp. The chimp skull has a larger brow ridge and nose.

2. Now, examine the **Bottom view** of the two skulls. How do they compare?

The mouth of the chimp skulls is bigger. The foramen magnum on the human skull is closer to the front of the skull.
