The Human Bone Manual Tim D. White, Pieter A. Folkens, 2005-11-08 Building on the success of their previous book White and Folkens The Human Bone Manual is intended for use outside the laboratory and classroom by professional forensic scientists anthropologists and researchers The compact volume includes all the key information needed for identification purposes including hundreds of photographs designed to show a maximum amount of anatomical information Features more than 500 color photographs and illustrations in a portable format most in 1:1 ratio Provides multiple views of every bone in the human body Includes tips on identifying any human bone or tooth Incorporates up to date references for further study

The Human Bone Manual Tim White, Pieter Folkens, 2005-10-13 *The Abu Bakr Cemetery at Giza* Edward Brovarski, Tohfa Handoussa, 2021-07-31 The present volume reflects the work of the joint expedition of Cairo University and Brown University to record and publish the tombs uncovered on behalf of Cairo University by Prof Abdel Moneim Abu Bakr from 1949 through 1953 but never published The loss of field records and lack of a map of the site meant that new salvage excavation had to be undertaken A total of six seasons from 2000-2006 resulted in the clearing remapping and recording of the monuments in the cemetery Abu Bakr Cemetery is of particular interest because the majority of mastaba tombs belong to relatively low ranking individuals Thus they have the potential to shed light on the social status of Egypt's working classes

Born to Walk James Earls, 2014 The ability to walk upright on two legs is one of the major traits that define us as humans yet scientists still aren't sure why we evolved to walk as we do In *Born to Walk* author James Earls explores the mystery of our evolution by describing in depth the mechanisms that allow us to be efficient in bipedal gait Viewing the whole body as an interconnected unit Earls explains how we can regain a flowing efficiency within our gait an efficiency which he argues is part of our natural design This book is designed for movement therapy practitioners physiotherapists osteopaths chiropractors massage therapists and any bodyworker wishing to help clients by incorporating an understanding of gait and its mechanics It will also appeal to anyone with an interest in evolution and movement Drawing on recent research from paleoanthropology sports science and anatomy Earls proposes a complete model of how the whole body cooperates in this three dimensional action His work is based on Thomas Myers's *Anatomy Trains* model of human anatomy a holistic view of the human body that emphasizes fascial and myofascial connections Earls distills the complex action of walking into a simple sequence of essential events or actions that are necessary to engage the myofascia and utilize its full potential in the form of elastic energy He explains the stretch shortening cycle the mechanism that is the basis for many normal human activities and discusses how humans take advantage of isometric contractions viscoelastic response and elastic recoil to minimize calorie usage This streamlined efficiency is what enabled our first ancestors to begin to migrate not only seasonally but also permanently to new lands thereby expanding the natural resources available to us as a species

Human Identity and Identification Rebecca Gowland,Tim

Thompson,2013-01-17 Few things are as interesting to us as our own bodies and by extension our own identities In recent years there has been a growing interest in the relationship between the body environment and society Reflecting upon these developments this book examines the role of the body in human identification in the forging of identities and the ways in which it embodies our social worlds The approach is integrative taking a uniquely biological perspective and reflecting on current discourse in the social sciences With particular reference to bioarchaeology and forensic science the authors focus on the construction and categorisation of the body within scientific and popular discourse examining its many tissues from the outermost to the innermost from the skin to DNA Synthesising two traditionally disparate strands of research this is a valuable contribution to research on human identification and the embodiment of identity

The Archaeology of Cremation Tim Thompson,2015-03-31 Human societies have disposed of their dead in a variety of ways However while considerable attention has been paid to bodies that were buried comparatively little work has been devoted to understanding the nature of cremated remains despite their visibility through time It has been argued that this is the result of decades of misunderstanding regarding the potential information that this material holds combined with properties that make burned

bone inherently difficult to analyse As such there is a considerable body of knowledge on the concepts and practices of inhumation yet our understanding of cremation ritual and practice is by comparison woefully inadequate This timely volume therefore draws together the inventive methodology that has been developed for this material and combines it with a fuller interpretation of the archaeological funerary context It demonstrates how an innovative methodology when applied to a challenging material can produce new and exciting interpretations of archaeological sites and funerary contexts The reader is introduced to the nature of burned human remains and the destructive effect that fire can have on the body Subsequent chapters describe important cremation practices and sites from around the world and from the Neolithic period to the modern day By emphasising the need for a robust methodology combined with a nuanced interpretation it is possible to begin to appreciate the significance and wide spread adoption of this practice of dealing with the dead
