being boring but in the hands of able picture book authors it's anything but. In *Text Structures From Nonfiction Picture Books*, elementary and middle grade teachers can channel the curiosity piqued from amazing true tales to help students further their reading comprehension and writing skills. With the bite-sized format of nonfiction picture books as a starting point, this practical book shares over 40 low-prep, quick-access lessons to get students reading, writing, and responding to nonfiction texts with ease. The book provides a wealth of instruction, including step-by-step lessons with multiple ways to use each picture book to prompt students' writing and analysis of the text. An extensive list of nonfiction picture book titles, organized by books about people, books about places, books about things, and books about animals, topics, text structures, and writer's craft moves, is provided for each book. Lessons that introduce kernel essays, truisms, and reading response, embedded terms, examples, and assignments to teach the vocabulary of writer's craft, including refrain, polysyndeton, antithesis, and more, are based on master writing teacher Gretchen Bernabei's instructional model. The lessons offer a lively, high-impact mix of reading aloud, discussion, modeling, student writing, and peer share. Plus, readers have access to a complete companion website full of text structure reproducibles, reading response prompts, additional lessons, and extensions, student samples, and links to demo videos.

Perfect Pairs, 3-5, Melissa Stewart, Nancy Chesley, 2023-10-10. Hands-on lessons can be fun and compelling, but when it comes to life science, they aren't always possible, practical, effective, or safe. Children can't follow wolves as they hunt elk, visit a prehistoric swamp, or shrink down to the size of a molecule and observe photosynthesis firsthand. But they can explore a whole world of animals, plants, and ecosystems through the pages of beautifully illustrated science-themed picture books. *Perfect Pairs*, which marries fiction and nonfiction picture books focused on life science, helps educators think about and teach life science in a whole new way. Each of the twenty lessons in this book is built around a pair of books that introduces a critical life science concept and guides students through an inquiry-based investigative process to explore that idea, from life cycles and animal environment interactions to the inheritance of traits and the critical role of energy in our world. Each lesson starts with a Wonder Statement and comprises three stages: Engaging Students features a hands-on activity that captures student interest, uncovers current thinking, and generates vocabulary; The heart of the investigative process, Exploring with Students, spotlights the paired books as the teacher reads aloud and helps students find and organize information into data tables; Encouraging Students to Draw Conclusions shows students how to review and analyze the information they have collected. Bringing high-quality science-themed picture books into the classroom engages a broad range of students, addresses the Performance Expectations outlined in the Next Generation Science Standards, and supports the goals of the Common Core State Standards for English Language Arts. Even if you are science-shy, *Perfect Pairs* can help you become a more confident teacher whose classroom buzzes with curious students eager to explore their natural world.
