Hybrid And Electrical Vehicle Field Guide:

Hybrid and Electric Vehicle Emergency Field Guide, 2013 Edition National Fire Protection Association, 2013

Fundamentals of Fire Fighter Skills Iafc, 2014-09-12 Evidence Based Practices for Strategic and Tactical Firefighting is a synopsis of the UL NIST research studies and experiments on fire behavior and techniques for ventilation fire suppression and search and rescue as a result of the changes in modern building construction and furnishing materials. As a result of these changes today's fires release energy faster, reach flashover potential sooner, may reach higher temperatures and are much more likely to become ventilation limited than building fires of even a few years ago. Developed in partnership with the International Association of Fire Chiefs IAFC and National Fire Protection Association NFPA, Evidence Based Practices for Strategic and Tactical Firefighting details many of the findings discovered as the result of an ongoing series of experiments conducted by NIST, UL and the New York City Fire Department FDNY and provides the most up to date information available today for Fire Fighter, Fire Officer and Fire Science students. Additional information about these and other fire experiments can be obtained online at the NIST website by searching under Fire Fighting Technology and at the UL website by searching under Fire Fighter Safety Research Institute. 2016, 24 pages. [Architecture and Standardization Needs](#) Beate Müller, Gereon Meyer, 2015-02-25 This edited volume presents research results of the PPP European Green Vehicle Initiative EGVI focusing on Electric Vehicle Systems Architecture and Standardization Needs. The objectives of energy efficiency and zero emissions in road transportation imply a paradigm shift in the concept of the automobile regarding design, materials and propulsion technology. A redesign of the electric and electronic architecture provides in many aspects additional potential for reaching these goals. At the same time, standardization within a broad range of features, components and systems is a key enabling factor for a successful market entry of the electric vehicle (EV). It would lower production cost, increase interoperability and compatibilities and sustain market penetration. Hence, novel architectures and testing concepts and standardization approaches for the EV have been the topic of an expert workshop of the European Green Vehicles Initiative PPP. This book contains the contributions of current European research projects on EV architecture and an expert view on the status of EV standardization. The target audience primarily comprises researchers and experts in the field. **Modeling and Simulation for Electric Vehicle Applications**
