Law at Work Baudouin Dupret, Michael Lynch, Tim Berard, 2015 What does Sharia Law look like in the actual practice of family law How do lawyers lead witnesses contradict themselves or make hate crimes seem less hateful or criminal in particular cases This collection of empirical studies addresses these and many other questions about the conduct of law in practice by treating law as a relationship between legal institutions and an external society

A Modern Enterprise Architecture Approach Dr Mehmet Yildiz, 2019-10-07 The revised version of this book to provide essential guidance compelling ideas and unique ways to Enterprise Architects so that they can successfully perform complex enterprise modernisation initiatives transforming from chaos to coherence This is not an ordinary theory book describing Enterprise Architecture in detail There are myriad of books on the market and in libraries discussing details of enterprise architecture My aim here is to highlight success factors and reflect lessons learnt from the field within enterprise modernisation and transformation context As a practising Senior Enterprise Architect myself I read hundreds of those books and articles to learn different views They have been valuable to me to establish my foundations in the earlier phase of my profession However what is missing now is a concise guidance book showing Enterprise Architects the novel approaches insights from the real life experience and experimentations and pointing out the differentiating technologies for enterprise modernisation If only there were such a guide when I started engaging in modernisation and transformation programs The biggest lesson learned is the business outcome of the enterprise modernisation What genuinely matters for business is the return on investment of the enterprise architecture and its monetising capabilities The rest is the theory because nowadays sponsoring executives due to economic climate have no interest attention or tolerance for non profitable ventures I am sorry for disappointing some idealistic Enterprise Architects but with due respect it is the reality and we cannot change it This book deals with reality rather than theoretical perfection Anyone against this view on this climate must be coming from another planet In this concise uncluttered and easy to read book I attempt to show the significant pain points and valuable considerations for enterprise modernisation using a structured approach and a simple narration especially considering my audience from non English speaking backgrounds The architectural rigour is still essential We cannot compromise the rigour

aiming to the quality of products and services as a target outcome However there must be a delicate balance among architectural rigour business value and speed to the market I applied this pragmatic approach to multiple substantial transformation initiatives and complex modernisations programs The key point is using an incrementally progressing iterative approach to every aspect of modernisation initiatives including people processes tools and technologies as a whole Starting with a high level view of enterprise architecture to set the context I provided a dozen of distinct chapters to point out and elaborate on the factors which can make a real difference in dealing with complexity and producing excellent modernisation initiatives As eminent leaders Enterprise Architects are the critical talents who can undertake this massive mission using their people and technology skills in addition to many critical attributes such as calm and composed approach Let s keep in mind that as Enterprise Architects we are architects not firefighters I have full confidence that this book can provide valuable insights and some aha moments for talented architects like yourself to tackle this enormous mission of turning chaos to coherence

The Accelerating Transport Innovation Revolution George Giannopoulos, John F. Munro, 2019-04-17 The Accelerating Transport Innovation Revolution A Global Case Study based Assessment of Current Experience Cross sectorial Effects and Socioeconomic Transformations offers a comprehensive view of current state of the art and practices around the world to create innovation on a revolutionary scale and connect research to commercial exploitation of its results It offers a fascinating new model of the innovation process based on theories of biological ecosystems general systems theory and basins of attraction represented through space time graphs well known in mathematics Furthermore it considers through a number of dedicated chapters key issues and elements of innovation ecosystems such as Causal Factors and system constraints affecting the development and sustainability of innovation ecosystems Chapter 4 Review of innovation organization and governance in key countries and regions Chapter 5 the role of technological Spillovers Chapter 6 Collection and use of data for innovation monitoring and benchmarking Chapter 7 Intellectual Property protection between competing ecosystems Chapter 8 Economics of innovation Chapter 9 Public and private sector involvement in Transport innovation creation Chapter 10 the role of the individual entrepreneur innovator in energizing change Chapter 11 Finally in Chapter 12 there is a thorough summary of key findings This book uses a paradigmatic approach to augment the innovation ecosystem model of innovation that integrates beliefs and learning into the innovation ecosystems model It therefore includes ten case studies from the U S Europe and Asia detailing how innovation is created across continents and different ecosystems and what are the critical lessons to be learned It does this effectively at five different levels of analysis i e the individual innovator entrepreneur level the organization level government agency or company the regional ecosystem level the nation state level and the global systemic or international level Each level of analysis reveals unique features of the innovation landscape and the ten case studies allow the reader to assess when and where specific enablers are facilitating innovation especially on a revolutionary scale The need for the book came from the

realization that despite the billions of dollars spent on various research programs over the past 20 years especially in the public sector there have been few clear and tangible efforts directed at exploring how innovation production increasingly occurs and the critical factors necessary to sustain large scale revolutionary change as the future unfolds Thus a primary theme of the book is that understanding how research results translate into market innovation and implementation especially understanding the nature of revolutionary innovation is as important as the creation of innovations themselves While the focus of the book is on Transportation the concepts and recommendations presented apply to other fields too Formulates and presents a workable and comprehensive new model of innovation Defines and analyzes many concepts and notions related to innovation research and market implementation Examines the critical factors affecting innovation production and successful commercial implementation of research results Examines organizational models of coordination governance data collection process analysis and use of intellectual property tools Includes recent well researched and documented case studies of successful innovation ecosystems across the world mainly but not only in the Transport field
