Mathematical Methods for Signal and Image Analysis and Representation Luc Florack, Remco Duits, Geurt Jongbloed, Marie Colette van Lieshout, Laurie Davies, 2012-01-13 Mathematical Methods for Signal and Image Analysis and Representation presents the mathematical methodology for generic image analysis tasks In the context of this book an image may be any m dimensional empirical signal living on an n dimensional smooth manifold typically but not necessarily a subset of spacetime The existing literature on image methodology is rather scattered and often limited to either a deterministic or a statistical point of view In contrast this book brings together these seemingly different points of view in order to stress their conceptual relations and formal analogies Furthermore it does not focus on specific applications although some are detailed for the sake of illustration but on the methodological frameworks on which such applications are built making it an ideal companion for those seeking a rigorous methodological basis for specific algorithms as well as for those interested in the fundamental methodology per se Covering many topics at the forefront of current research including anisotropic diffusion filtering of tensor fields this book will be of particular interest to graduate and postgraduate students and researchers in the fields of computer vision medical imaging and visual perception [Mathematical Foundations of Computer Science 1988](#) Michal Chytil, Ladislav Janiga, Václav Koubek, 1988 This volume contains 11 invited lectures and 42 communications presented at the 13th Conference on Mathematical Foundations of Computer Science MFCS 88 held at Carlsbad Czechoslovakia August 29 September 2 1988 Most of the papers present material from the following four fields complexity theory in particular structural complexity concurrency and parallelism formal language theory semantics Other areas treated in the proceedings include functional programming inductive syntactical synthesis unification algorithms relational databases and incremental attribute evaluation *Energy Minimization Methods in Computer Vision and Pattern Recognition* Xue-Cheng Tai, Egil Bae, Tony F. Control and Dynamic Systems Volume 36 Richard A Leondes, 1990-09-28 Control and Dynamic Systems Advances in Theory and Applications Volume 36 reviews advances in theory and applications of large scale control and dynamic systems Contributors focus on production control and the determination of optimal production rates along with active control systems uncertainty in control system design and methods for analyzing multistage commodity markets This volume is organized into eight chapters and begins with an introduction to multiobjective decision tree analysis and its significance in applied situations with two substantive examples It then shifts to important techniques for the determination of robust economic policies methods used in the analysis of multistage commodity markets and a computationally effective algorithm for the determination of the optimal production rate This book also describes many highly effective techniques for near optimal and robust model truncation Robust adaptive identification and control algorithms for disturbances and unmodeled system dynamics are given consideration The final chapter provides examples of the applied significance of the techniques presented in this book including such large scale systems areas as aerospace defense chemical environmental and infrastructural industries This book will be of interest to students and researchers in engineering and computer science Handbook of Tableau Methods M. D'Agostino, Dov M. Gabbay, Reiner Hähnle, J. Posegga, 2013-03-09 Recent years have been blessed with an abundance of logical systems arising from a multitude of applications A logic can be characterised in many different ways Traditionally a logic is presented via the following three components 1 an intuitive non formal motivation perhaps tie it in to some application area 2 a semantical interpretation 3 a proof theoretical formulation There are several types of proof theoretical methodologies Hilbert style Gentzen style goal directed style labelled deductive system style and so on The tableau methodology invented in the 1950s by Beth and Hintikka and later perfected by Smullyan and Fitting is today one of the most popular since it appears to bring together the proof theoretical and the semantical approaches to the pre of a logical system and is also very intuitive In many universities it is sensation the style first taught to students Recently interest

in tableaux has become more widespread and a community crystallised around the subject An annual tableaux conference is being held and proceedings are published The present volume is a Handbook a Tableaux pre senting to the community a wide coverage of tableaux systems for a variety of logics It is written by active members of the community and brings the reader up to frontline research It will be of interest to any formal logician from any area
