Mathematical and Statistics Anxiety: Educational, Social, Developmental and Cognitive Perspectives Kinga Morsanyi,Irene Cristina Mammarella,Denes Szűcs,Carlo Tomasetto,Caterina Primi,Erin Anne Maloney,2017-01-19

Mathematical anxiety is a feeling of tension apprehension or fear which arises when a person is faced with mathematical content The negative consequences of mathematical anxiety are well documented Students with high levels of mathematical anxiety might underperform in important test situations they tend to hold negative attitudes towards mathematics and they are likely to opt out of elective mathematics courses which also affects their career opportunities Although at the university level many students do not continue to study mathematics social science students are confronted with the fact that their disciplines involve learning about statistics another potential source of anxiety for students who are uncomfortable with dealing with numerical content Research on mathematical anxiety is a truly interdisciplinary field with contributions from educational developmental cognitive social and neuroscience researchers The current collection of papers demonstrates the diversity of the field offering both new empirical contributions and reviews of existing studies The contributors also outline future directions for this line of research

Progress in Physics, vol. 3/2015 Dmitri Rabounski ,Florentin Smarandache, Larissa Borissova, The Journal on Advanced Studies in Theoretical and Experimental Physics including Related Themes from Mathematics **World Congress on Medical Physics and Biomedical Engineering, June 7-12, 2015, Toronto, Canada**

David A. Jaffray,2015-07-13 This book presents the proceedings of the IUPESM World Biomedical Engineering and Medical Physics a tri annual high level policy meeting dedicated exclusively to furthering the role of biomedical engineering and medical physics in medicine The book offers papers about emerging issues related to the development and sustainability of the role and impact of medical physicists and biomedical engineers in medicine and healthcare It provides a unique and important forum to secure a coordinated multileveled global response to the need demand and importance of creating and supporting strong academic and clinical teams of biomedical engineers and medical physicists for the benefit of human health *The Underrepresentation of Women in Science: International and Cross-Disciplinary Evidence and Debate* Stephen J. Ceci,Wendy M. Williams,Shulamit Kahn,2018-04-20

There is no shortage of articles and books exploring women s underrepresentation in science Everyone is interested academics politicians parents high school girls and boys women in search of college majors administrators working to accommodate women s educational interests the list goes on But one thing often missing is an evidence based examination of the problem uninfluenced by personal opinions accounts of lived experiences anecdotes and the always encroaching inputs of popular culture This is why this special issue of Frontiers in Psychology can make a difference In it a diverse group of authors and researchers with even more diverse viewpoints find themselves united by their empirical objective approaches to understanding women s underrepresentation in science today The questions considered within this special issue span academic disciplines methods levels of analysis and nature of analysis

what these article share is their scholarly evidence based approach to understanding a key issue of our time

Flow and Transformations in Porous Media Renaud Toussaint,Bjørnar Sandnes,Daniel Koehn,Piotr Szymczak,Einat Aharonov,2017-02-07 Fluid flow in transforming porous rocks fracture networks and granular media is a very active interdisciplinary research subject in Physics Earth Sciences and Engineering Examples of natural and engineered processes include hydrocarbon recovery carbon dioxide geo sequestration soil drying and wetting pollution remediation soil liquefaction landslides dynamics of wet or dry granular media dynamics of faulting or friction volcanic eruptions gas venting in sediments karst development and speleogenesis ore deposit development and radioactive waste disposal Hydrodynamic flow instabilities and pore scale disorder typically result in complex flow patterning In transforming media additional mechanisms come into play compaction de compaction erosion segregation and fracturing lead to changes in permeability over time Dissolution precipitation and chemical reactions between solutes and solids may gradually alter the composition and structure of the solid matrix either creating or destroying permeable paths for fluid flow A complex dynamic feedback thus arises where on the one hand the fluid flow affects the characteristics of the porous medium and on the other hand the changing medium influences the fluid flow This Research Topic Ebook presents current research illustrating the depth and breadth of ongoing work in the field of flow and transformation in porous media through 15 papers by 72 authors from around the world The body of work highlights the challenges posed by the vast range of length and time scales over which subsurface flow processes occur Importantly phenomena from each scale contribute to the larger scale behavior The flow of oil and gas in reservoirs and the flow of groundwater on catchment scale is sensitively linked to pore scale processes and material heterogeneity down to the micrometer scale The geological features of the same reservoirs and catchments evolved over millions of years sometimes as a consequence of cracking and fracture growth occurring on the time scale of microseconds The research presented by the authors of this Research Topic represents a step toward bridging the separation of scales as well as the separation of scientific disciplines so that a more unified picture of flow and transformation in porous media can start to emerge

Collision of Power Martin Baron,2023-10-03 A closely observed gripping chronicle of politics and journalism during a decade of turmoil The New York Times Book Review Politics Money Media Tech It s all here in Collision of Power All the President s Men for a new generation Town Country Marty Baron took charge of The Washington Postnewsroom in 2013 after nearly a dozen years leading The Boston Globe Just seven months into his new job Baron received explosive news Jeff Bezos the founder of Amazon would buy the Post marking a sudden end to control by the venerated family that had presided over the paper for 80 years Just over two years later Donald Trump won the presidency Now the capital s newspaper owned by one of the world s richest men was tasked with reporting on a president who had campaigned against the press as the lowest form of humanity Pressures on Baron and his colleagues were immense and unrelenting having to meet the demands of their new owner while contending with a president who waged a war of

unprecedented vitriol and vengeance against the media In the face of Trump's unceasing attacks Baron steadfastly managed the Post's newsroom Their groundbreaking and award winning coverage included stories about Trump's purported charitable giving misconduct by the Secret Service and Roy Moore's troubling sexual history At the same time Baron managed a restive staff during a period of rapidly changing societal dynamics around gender and race In *Collision of Power* Baron recounts this with the tenacity of a reporter and the sure hand of an experienced editor The result is elegant and revelatory an urgent exploration of the nature of power in the 21st century [Progress in Physics, vol. 2/2015](#) Dmitri Rabounski , Florentin

Smarandache, Larissa Borissova, The Journal on Advanced Studies in Theoretical and Experimental Physics including Related Themes from Mathematics **Quantitative Methods for Economics and Finance** J.E. Trinidad-Segovia, Miguel Ángel

Sánchez-Granero, 2021-02-12 This book is a collection of papers for the Special Issue Quantitative Methods for Economics and Finance of the journal Mathematics This Special Issue reflects on the latest developments in different fields of economics and finance where mathematics plays a significant role The book gathers 19 papers on topics such as volatility clusters and volatility dynamic forecasting stocks indexes cryptocurrencies and commodities trade agreements the relationship between volume and price trading strategies efficiency regression utility models fraud prediction or intertemporal choice **Causal**

Inference in Econometrics Van-Nam Huynh, Vladik Kreinovich, Songsak Sriboonchitta, 2015-12-28 This book is devoted to the analysis of causal inference which is one of the most difficult tasks in data analysis when two phenomena are observed to be related it is often difficult to decide whether one of them causally influences the other one or whether these two phenomena have a common cause This analysis is the main focus of this volume To get a good understanding of the causal inference it is important to have models of economic phenomena which are as accurate as possible Because of this need this volume also contains papers that use non traditional economic models such as fuzzy models and models obtained by using neural networks and data mining techniques It also contains papers that apply different econometric models to analyze real life economic dependencies **Mathematics for Healthcare** Krasimira Tsaneva-Atanasova, Vanessa

Diaz-Zuccarini, 2018-09-28 In 1996 and with extraordinary prescience Panfilov and Holden had highlighted in their seminal book *Computational Biology of the Heart* that biology was potentially the most mathematical of all sciences Fast forward 20 years and we have seen an explosion of applications of mathematics in not only biology but healthcare that has already produced significant breakthroughs not imaginable more than 20 years ago Great strides have been made in explaining through quantitative methods the underlying mechanisms of human disease not without considerable ingenuity and effort Biological mechanisms are bewildering complex ever evolving multi scale variable difficult to fully access and understand This poses immense challenges to the computational physiology community that nevertheless has developed an impressive arsenal of tools and methods in a vertiginous race to combat disease with the tall order of improving human healthcare Mechanistic models are now contending with the advent of machine learning in healthcare and the hope is that both

approaches will be used synergistically since the complexity of human pathophysiology and the difficulty of acquiring human datasets will require both deductive and inductive methods This Research Topic presents work that is currently at the frontier in computational physiology with a striking range of applications from diabetes to graft failure and using a multitude of mathematical tools This collection of articles represents a snapshot in a field that is moving a dizzying speed bringing understanding of fundamental mechanism and solutions to healthcare problems experienced by healthcare systems all over the world

Around Langlands Correspondences Farrell Brumley, Maria Paula Gomez Aparicio, Alberto Minguez, 2017 Presents through a mix of research and expository articles some of the fascinating new directions in number theory and representation theory arising from recent developments in the Langlands program Special emphasis is placed on nonclassical versions of the conjectural Langlands correspondences where the underlying field is no longer the complex numbers
