*Complex Projects* Yuri G. Raydugin, 2020-07-16 Project practitioners and decision makers complain that both parametric and  
Monte Carlo methods fail to produce accurate project duration and cost contingencies in majority of cases Apparently the  
referred methods have unacceptably high systematic errors as they miss out critically important components of project risk

exposure In the case of complex projects overlooked are the components associated with structural and delivery complexity  
Modern Risk Quantification in Complex Projects Non linear Monte Carlo and System Dynamics Methodologies zeroes in on  
most crucial but systematically overlooked characteristics of complex projects Any mismatches between two fundamental

interacting subsystems a project structure subsystem and a project delivery subsystem result in non linear interactions of  
project risks Three kinds of the interactions are distinguished internal risk amplifications stemming from long term chronic  
project system issues knock on interactions and risk compounding Affinities of interacting risks compose dynamic risk

patterns supported by a project system A methodology to factor the patterns into Monte Carlo modelling referred to as non  
linear Monte Carlo schedule and cost risk analysis N SCRA is developed and demonstrated It is capable to forecast project  
outcomes with high accuracy even in the case of most complex and difficult projects including notorious projects outliers it

has a much lower systematic error The power of project system dynamics is uncovered It can be adopted as an accurate risk  
quantification methodology in complex projects Results produced by the system dynamics and the non linear Monte Carlo  
methodologies are well aligned All built Monte Carlo and system dynamics models are available on the book's companion
