Teaching Mathematics in the Block Susan Nicodemus Gilkey, Carla Herndon Hunt, 1998 First Published in 1998

Routledge is an imprint of Taylor Francis an informa company *Success in the Urban Classroom*, 2002 **eWork and eBusiness in Architecture, Engineering and Construction** Alain Zarli, Raimar Scherer, 2008-09-03 Since 1994 the European Conference on Product and Process Modelling www.ecppm.org has been providing a review of research development and industrial implementation of product and process model technology in construction The 7th European Conference on Product and Process Modelling ECPPM 2008 provided a unique discussion platform for topics of CD-ROMs in Print, 2003 **Parabolic Geometries I** Andreas Čap, Jan Slovák, 2024-07-29 Parabolic geometries encompass a very diverse class of geometric structures including such important examples as conformal projective and almost quaternionic structures hypersurface type CR structures and various types of generic distributions The characteristic feature of parabolic geometries is an equivalent description by a Cartan geometry modeled on a generalized flag manifold the quotient of a semisimple Lie group by a parabolic subgroup Background on differential geometry with a view towards Cartan connections

and on semisimple Lie algebras and their representations which play a crucial role in the theory is collected in two introductory chapters. The main part discusses the equivalence between Cartan connections and underlying structures including a complete proof of Kostant's version of the Bott-Borel-Weil theorem which is used as an important tool. For many examples the complete description of the geometry and its basic invariants is worked out in detail. The constructions of correspondence spaces and twistor spaces and analogs of the Fefferman construction are presented both in general and in several examples. The last chapter studies Weyl structures which provide classes of distinguished connections as well as an equivalent description of the Cartan connection in terms of data associated to the underlying geometry. Several applications are discussed throughout the text.

Brauer Groups and Obstruction Problems Asher Auel, Brendan Hassett, Anthony Várilly-Alvarado, Bianca Viray, 2017-03-02. The contributions in this book explore various contexts in which the derived category of coherent sheaves on a variety determines some of its arithmetic. This setting provides new geometric tools for interpreting elements of the Brauer group. With a view towards future arithmetic applications, the book extends a number of powerful tools for analyzing rational points on elliptic curves, e.g. isogenies, torsion points, modular curves, and the resulting descent techniques, as well as higher dimensional varieties like K3 surfaces. Inspired by the rapid recent advances in our understanding of K3 surfaces, the book is intended to foster cross-pollination between the fields of complex algebraic geometry and number theory.
