external environment to multiply their grasping and manipulation capabilities Under this regard a preeminent role is reserved to touch being that skin is our primary organ to shape our knowledge of the external world and hence to modify it in interaction with the efferent parts This Research Topic reports results on the mutual inspiration between neuroscience and robotics and on how it is possible to translate neuroscientific findings on human manipulation into engineering guidelines for simplified systems able to take full advantage from the interaction and hence exploitation of environmental constraints for task accomplishment and knowledge acquisition

Federal Register, 2013-04 **Design Concepts for a Virtualizable Embedded MPSoC Architecture** Alexander Biedermann, 2014-11-10 Alexander Biedermann presents a generic hardware based virtualization approach which may transform an array of any off the shelf embedded processors into a multi processor system with high execution dynamism Based on this approach he highlights concepts for the design of energy aware systems self healing systems as well as parallelized systems For the latter the novel so called Agile Processing scheme is introduced by the author which enables a seamless transition between sequential and parallel execution schemes The design of such virtualizable systems is further aided by introduction of a dedicated design framework which integrates into existing commercial workflows As a result this book provides comprehensive design flows for the design of embedded multi processor systems on chip

The Digital Transformation of Labor Anthony Larsson, Robin Teigland, 2019-11-11 Through a series of studies the overarching aim of this book is to investigate if and how the digitalization digital transformation process causes or may cause the autonomy of various labor functions and its impact in creating or stymieing various job opportunities on the labor market This book also seeks to illuminate what actors groups are mostly benefited by the digitalization digital transformation and which actors groups that are put at risk by it This book takes its point of departure from a 2016 OECD report that contends that the impact digitalization has on the future of labor is ambiguous as on the one hand it is suggested that technological change is labor saving but on the other hand it is suggested that digital technologies have not created new jobs on a scale that it replaces old jobs Another 2018 OECD report indicated that digitalization and automation as such does

not pose a real risk of destroying any significant number of jobs for the foreseeable future although tasks would by and large change significantly This would affects welfare as most of its revenue stems from taxation and particularly so from the taxation on labor directly or indirectly For this reason this book will set out to explore how the future technological and societal advancements impact labor conditions The book seeks to provide an innovative enriching and controversial take on how various aspects of the labor market can be and are affected the ongoing digitalization trend in a way that is not covered by extant literature As such this book intends to cater to a wider readership from a general audience and students to specialized professionals and academics wanting to gain a deeper understanding of the possible future developments of the labor market in light of an accelerating digitalization digital transformation of society at large
