Lab: Human Genetic Traits

Directions: This exercise deals with the action of human genes on desecrate, easily observable traits. You will make observations of these traits in yourself and in your classmates to gain an understanding of how particular genes are expressed in humans. These traits are known as single-gene traits, which are the expressions of two alleles at one gene locus. Have another student check you for each of the traits listed in the table below. Record in the table on the next page your results. Under phenotype list if you are dominant or recessive for the trait and under genotype list possible combinations of genes.

TRAIT	DOMINANT	RECESSIVE
Bent Pinky (<i>B, b</i>)	Last joint is bent	Last joint is straight
Skin Color (<i>S, s</i>)	Dark colors	Light colors
Freckles (<i>F, f</i>)	Present	Absent

Teacher's Wraparound Edition: Two Biology Everyday Experience Albert Kaskel, 1994-04-19 **Wild Immunology—The Answers Are Out There** Gregory M. Woods, Andrew S. Flies, 2019-03-20 Go into partnership with nature she does more than half the work and asks none of the fee Martin H Fisher Nature has undertaken an immense amount of work throughout evolution The evolutionary process has provided a power of information that can address key questions such as Which immune molecules and pathways are conserved across species Which molecules and pathways are exploited by pathogens to cause disease What methods can be broadly used or readily adapted for wild immunology How does co infection and exposure to a dynamic environment affect immunity Section 1 addresses these questions through an evolutionary approach Laboratory mice have been instrumental in dissecting the nuances of the immune system The first paper investigates the immunology of wild mice and reviews how evolution and ecology sculpt differences in the immune responses of wild mice and laboratory mice A better understanding of wild immunology is required and sets the scene for the subsequent papers Although nature doesn't ask for a fee it is appropriate that nature is repaid in one form or another The translational theme of the second section incorporates papers that translate wild immunology back to nature But any non human non laboratory mouse research environment is hindered by a lack of research tools hence the underlying theme throughout the second section Physiological resource allocation is carefully balanced according to the most important needs of the body Tissue homeostasis can involve trade offs between energy requirements of the host and compensatory mechanisms to respond to infection The third section comprises a collection of papers that employ novel strategies to understand how the immune system is compensated under challenging physiological situations Technology has provided substantial advances in understanding the immune system at cellular and molecular levels The specificity of these tools e g monoclonal antibodies often limits the study to a specific species or strain A consequence of similar genetic sequences or cross reactivity is that the technology can be adapted to wild species Section 4 provides two examples of probing wild immunology by adapting technology developed for laboratory species Modern Biology Towle, Albert Towle, 1991
