**Hydrocarbon Processing** ,1984-10 **The Refinery of the Future** James G. Speight,2010-12-21 As feedstocks to refineries change there must be an accompanying change in refinery technology This means a movement from conventional means of refining heavy feedstocks using typically coking technologies to more innovative processes that will coax the last drips of liquid fuels from the feedstock This book presents the evolution of refinery processes during the last century and as well as the means by which refinery processes will evolve during the next three to five decades Chapters contain material relevant to 1 comparisons of current feedstocks with heavy oil and bio feedstocks 2 evolution of refineries since the 1950s 3 properties and refinability of heavy oil and bio feedstocks 4 thermal processes vs hydroprocesses and 5 evolution of products to match the environmental market Process innovations that have influenced refinery processing over the past three decades are presented as well as the relevant patents that have the potential for incorporation into future refineries Comparison of current feedstocks with heavy oil and bio feedstocks Evolution of refineries over the past three decades Properties and refinability of heavy oil and bio feedstocks Thermal processes vs Hydroprocesses Evolution of products to match the environmental market Investigates the engineering and plant design challenges presented by heavy oil and bio feedstocks Explores the legislative and regulatory climate including increasingly stringent environmental requirements Examines the trade offs of thermal processes vs hydroprocesses *The Blame Machine* Robert B. Whittingham,2004 The Blame Machine describes how disasters and serious accidents result from recurring but potentially avoidable human errors It shows how

such errors are preventable because they result from defective systems within a company From real incidents you will be able to identify common causes of human error and typical system deficiencies that have led to these errors On a larger scale you will be able to see where in the organisational or management systems failure occurred so that you can avoid them The book also describes the existence of a blame culture in many organisations which focuses on individual human error whilst ignoring the system failures that caused it The book shows how this blame culture has in the case of a number of past accidents dominated the accident enquiry process hampering a proper investigation of the underlying causes Suggestions are made about how progress can be made to develop a more open culture in organisations both through better understanding of human error by managers and through increased public awareness of the issues The book brings together documentary evidence from recent major incidents from all around the world and within the Rail Water Aviation Shipping Chemical and Nuclear industries
