**Principles and Practice of Constraint Programming - CP98**

Michael Maher, Jean-Francois Puget, 2003-05-20 Constraints have emerged as the basis of a representational and computational paradigm that draws from many disciplines and can be brought to bear on many problem domains. This volume contains papers dealing with all aspects of computing with constraints. In particular, there are several papers on applications of constraints reflecting the practical usefulness of constraint programming. The papers were presented at the 1998 International Conference on Principles and Practice of Constraint Programming CP 98 held in Pisa, Italy, 26-30 October 1998. It is the fourth in this series of conferences following conferences in Cassis, France; Cambridge, USA; and Schloss Hagenberg, Austria. We received 115 high quality submissions. In addition, 7 abstract submissions were not followed by a full paper, hence were not counted as submissions. The program committee selected 29 high quality papers after thorough refereeing by at least 3 experts and further discussion by committee members. We thank the referees and the program committee for the time and effort spent in reviewing the papers. The program committee invited three speakers: Joxan Jaffar, Peter Jeavons, and Patrick Prosser. Their papers are in this volume.

**Supply Chain Scheduling** Zhi-Long Chen, Nicholas G. Hall, 2022-02-07

Supply chain scheduling is a relatively new research area with less than 20 years of history. It is an intersection of two traditional areas: supply chain management and scheduling. In this book, the authors provide a comprehensive coverage of supply chain scheduling. The book covers applications, solution algorithms for solving related problems, evaluation of supply chain conflicts, and models for encouraging cooperation between decision makers. Supply chain scheduling studies detailed scheduling issues within supply chains as motivated by a variety of applications in the real world. Topics covered by the book include Coordinated decision making in centralized supply chains including integrated production and distribution scheduling, joint scheduling and product pricing and coordinated subcontracting and scheduling, Coordination and competition issues in

decentralized supply chains including conflict and cooperation within scheduling decisions made by different parties in supply chains and both cooperative and non cooperative supply chain scheduling games The book describes a variety of representative problems within each of these topics The authors define these problems mathematically describe corresponding applications and introduce solution methods for solving each problem to improve supply chain performance
