

# Finding the equation of a Linear Model

- ◊ Not all linear models are perfectly in line with all of the data points.
- ◊ If the data points are not perfectly on a line, we can still model it by drawing a line that's near most of the data points, and calculating the equation of that line to model the situation.
- ◊ We can check our work by generating a "linear regression" equation for the graph, basically a calculated line of best fit for the graph.
