Map Librarianship Susan Elizabeth Ward Aber, Jeremy Aber, 2016-11-04 Map Librarianship identifies basic geoliteracy concepts and enhances reference and instruction skills by providing details on finding, downloading, delivering and assessing maps, remotely sensed imagery and other geospatial resources and services primarily from trusted government sources. By offering descriptions of traditional maps, geographic information systems, GIS, remote sensing and other geospatial technologies, the book provides a timely and practical guide for the map and geospatial librarian to blend confidence in traditional library skill sets. Includes rarely discussed concepts of citing and referencing maps and geospatial data, fair use and copyright. Creates an awareness and appreciation of existing print map collections while building digital stewardship with surrogate map and aerial imagery collections. Provides an introduction to the theory and applications of GIS, remote sensing, participatory neogeography and neocartography practices and other geospatial technologies. Includes a list of geospatial resources with descriptions and illustrations of commonly used map types and formats, online geospatial data sources and an introduction to the most commonly used geospatial software packages available on both desktop and mobile platforms.

Image Processing and Data Analysis with ERDAS IMAGINE® Stacy A.C. Nelson, Siamak Khorram, 2018-10-03 Remotely sensed data in the form of digital images captured from spaceborne and airborne platforms provide a rich analytical and observational source of information about the current status as well as changes occurring in and around the Earth's surface. The data products or simply images processed from these platforms provide an additional advantage in that geographic areas or regions of interest can be revisited on a regular cycle. This revisit cycle allows geospatial analysts and natural resource managers to explore changing conditions over time. *Image Processing and Data Analysis with ERDAS IMAGINE* explains the principles behind the processing of remotely sensed data in a simple, easy to understand and how-to format. Organized as a step-by-step guide with exercises adapted from original research and using publicly available imagery such as NASA Landsat, ESA Sentinel 2, Orthophotos and others, this book gives readers the ability to quickly gain the practical experience needed to navigate the ERDAS IMAGINE software as well as learn certain applications in Esri's ArcMap, ArcGIS for Desktop software and Quantum, the GIS QGIS open source applications package. It also helps readers to easily move beyond the information presented in this book and tackle more advanced skills. Written by two professors with long experience in remote sensing and image processing, this book is a useful guide and reference for both undergraduate and graduate students, researchers, instructors, managers and agency professionals who are involved in the study of Earth systems and the environment.

System Reliability and Security Javaid Iqbal, Faheem Syeed Masoodi, Ishfaq Ahmad Malik, Shozab Khurshid, Iqra Saraf, Alwi M. Bamhdi, 2023-12-07 Because of the growing reliance on software, concerns are growing as to how reliable a system is before it is commissioned for use, how high the level of reliability is in the system and how many vulnerabilities exist in the system before its operationalization. Equally pressing issues include how to secure the system from

internal and external security threats that may exist in the face of resident vulnerabilities These two problems are considered increasingly important because they necessitate the development of tools and techniques capable of analyzing dependability and security aspects of a system These concerns become more pronounced in the cases of safety critical and mission critical systems System Reliability and Security Techniques and Methodologies focuses on the use of soft computing techniques and analytical techniques in the modeling and analysis of dependable and secure systems It examines systems and applications having complex distributed or networked architectures in such fields as Nuclear energy Ground transportation systems Air traffic control Healthcare and medicine Communications System reliability engineering is a multidisciplinary field that uses computational methods for estimating or predicting the reliability aspects of a system and analyzing failure data obtained from real world projects System security is a related field that ensures that even a reliable system is secure against accidental or deliberate intrusions and is free of vulnerabilities This book covers tools and techniques cutting edge research topics and methodologies in the areas of system reliability and security It examines prediction models and methods as well as how to secure a system as it is being developed

3D Remote Sensing Applications in Forest Ecology
Hooman Latifi, Ruben Valbuena, 2019-11-19 Dear Colleagues The composition, structure and function of forest ecosystems are the key features characterizing their ecological properties and can thus be crucially shaped and changed by various biotic and abiotic factors on multiple spatial scales. The magnitude and extent of these changes in recent decades calls for enhanced mitigation and adaptation measures. Remote sensing data and methods are the main complementary sources of up-to-date synoptic and objective information of forest ecology. Due to the inherent 3D nature of forest ecosystems the analysis of 3D sources of remote sensing data is considered to be most appropriate for recreating the forest's compositional, structural and functional dynamics. In this Special Issue of Forests we published a set of state-of-the-art scientific works including experimental studies, methodological developments and model validations all dealing with the general topic of 3D remote sensing assisted applications in forest ecology. We showed applications in forest ecology from a broad collection of method and sensor combinations including fusion schemes. All in all the studies and their focuses are as broad as a forest's ecology or the field of remote sensing and thus reflect the very diverse usages and directions toward which future research and practice will be directed.

Dynamic Response of Coasts and Estuaries to Human Impacts Xiao Hua Wang, 2024-07-25 The coasts cover a diverse range of ecosystems within marine, estuarine and freshwater environments. They are some of the most heavily populated and visited areas and are also some of the most threatened natural habitats. Coastal zones are critically important not only to the people who live there but for the health of the planet. Many world estuaries and coast environments

are under tremendous stress in response to global warming and the increased anthropogenic forcing Warmer waters rising sea levels tropical cyclones storm surges and flooding and coastal erosion are just some of the elements impacting coastal communities worldwide and transforming these environments Coastal hazards such as storm events with associated storm surges are increasing in frequency and intensity as are marine heatwaves that devastate coral reefs Human activities like sewage discharge overfishing navigation channel dredging land reclamation the construction of shipping ports and marine plastics are also responsible for coastal pollution and degradation Therefore a good understanding of the current state of coastal environments and lessons learnt from these human influences is extremely valuable to restore and protect these habitats and ecosystems from further environmental degradation and even catastrophe In this book case studies are used to tell a story about how these environments respond to severe human induced perturbations and what has gone right and wrong from environmental and resource management point of view The readership of the book include high level undergraduate Oceanography students and workers from Coastal Engineering and Management [Recent Advances in Material, Manufacturing, and Machine Learning](#) Rajiv Gupta,Devendra Deshmukh,Awanikumar P.
