

## Lab 1 – Introduction to Science

### Exercise 1: The Scientific Method

Dissolved oxygen is oxygen that is trapped in a fluid, such as water. Since many living organism requires oxygen to survive, it is a necessary component of water systems such as streams, lakes and rivers in order to support aquatic life. The dissolved oxygen is measured in units of parts per million (ppm). Examine the data in Table 4 showing the amount of dissolved oxygen present and the number of fish observed in the body of water the sample was taken from; finally, answer the questions below.

Table 4: Water Quality vs. Fish Population										
Dissolved Oxygen (ppm)	0	2	4	6	8	10	12	14	16	18
Number of Fish Observed	0	1	3	10	12	13	15	10	12	13

### QUESTIONS

1. *Make an observation* – Based on the data in Table 4, discuss what patterns you observe in regards to dissolved oxygen content and fish populations in the body of water?

Answer = I see that the more dissolved oxygen in the water, the less population of fish there will be.

2. *Do background research* – Utilizing at least one scholarly source, describe how the dissolved oxygen content in a body of water can effect fish populations.

Answer = "Oxygen depletions are the most common cause of fish kills in ponds." (Aqua plant, 2014) Based on what I read and the data shown in this particular chart, it shows that the higher the dissolved oxygen, the lower the number of fish. The dissolved oxygen levels can cause the fish to suffocate and makes them susceptible to diseases.
