

# CHAPTER 7: THE HUMAN ENDOCRINE SYSTEM AND HOMEOSTASIS

## Introduction

Various human mechanisms enable us to respond and react to the outside environment so as to maintain a constant internal environment. Our responses are controlled by the nervous and endocrine systems and to an extent, the immune system. The working together of these systems helps to maintain stability within the organism and so protects us.

The human nervous system responds via:

- a rapid response to stimuli
- the use of electrical impulses and neurotransmitters

The endocrine response is controlled by the endocrine glands situated throughout the body. This response is:

- a slower response that has a long-lived effect
- as the endocrine glands produce and release specific hormones into the bloodstream.
- An effector organ is targeted, and
- a response is initiated.
- When endocrine organs are either over- or under-stimulated, endocrine disorders are observed.
