

Eye Anatomy: Parts of the Human Eye

How Do the Eyes Work?

As basic as your eyes may seem, their ability to see makes them one of the most valuable assets in the human body.

The eyes work in the same way as cameras. When you focus on an object, light is reflected and enters the eye through the cornea. As the light passes through, the dome-shaped nature of the cornea bends light, enabling the eye to focus on fine details.

In addition to the retina, other visual components such as the pupil, iris (colored part of the eye), and lens help focus light rays on the retina. The retina is the light-sensitive membrane covering the back of the eye.

When light entering the eye hits the retina, special cells known as photoreceptors convert it into electrical signals.¹

The optic nerve carries these electrical impulses from the retina to the visual cortex (in the brain). The brain then interprets the impulses into the images you see.
