P. Kurian, Nainan P. Kurian, 2005 This textbook first published in 1992 now appearing in its third edition retains the best features from the earlier editions and adds significantly to the contents which include developments in the 1990s **Structural Foundation Designer's Manual** William George Curtin, 1994 *A Common Sense Design Manual for Producibility of Hull Foundations* John J. Hopkinson, 1996 *Seismic Design Guidelines for Port Structures* International Navigation Association Brussels, 2002-01-01 For the first time international guidelines for seismic design of port structures have been compiled in this comprehensive book These guidelines address the limitations inherent in conventional design and establish the framework for an evolutionary design strategy based on seismic response and performance requirements The provisions reflect the diverse nature of port facilities throughout the world where the required functions of port structures economic and social environment and seismic activities may differ from region to region This book comprises a main text and eight technical commentaries The main text introduces the reader to basic earthquake engineering concepts and a strategy for performance based design while the technical commentaries illustrate specific aspects of seismic analysis and design and provide examples of various applications of the guidelines Proven simplified methods and state of the art analysis procedures have been carefully selected and integrated in the guidelines in order to provide a flexible and consistent methodology for the seismic design of port facilities **Model Uncertainties in Foundation Design** Chong Tang, Kok-Kwang Phoon, 2021-03-17 Model Uncertainties in Foundation Design is unique in the compilation of the largest and the most diverse load test databases to date covering many foundation types shallow foundations spudcans driven piles drilled shafts rock sockets and helical piles and a wide range of ground conditions soil to soft rock All databases with names prefixed by NUS are available upon request This book presents a comprehensive evaluation of the model factor mean bias and coefficient of variation COV for ultimate and serviceability limit state based on these databases These statistics can be used directly for AASHTO LRFD calibration Besides load test databases performance databases for other geo structures and their model factor statistics are provided Based on this extensive literature survey a practical three tier scheme for classifying the model uncertainty of geo structures according to the model factor mean and COV is proposed This empirically grounded scheme can underpin the calibration of resistance factors as a function of the degree of understanding a concept already adopted in the Canadian Highway Bridge Design Code and being considered for the new draft for Eurocode 7 Part 1 EN 1997 1 202x The helical pile research in Chapter 7 was recognised by the 2020 ASCE Norman Medal **Rock-socketed Shafts for Highway Structure Foundations** John P.
