InfoSphere Warehouse: Cubing Services and Client Access Interfaces Chuck Ballard,Deepak Rangarao,Jimmy Tang,Philip Wittann,Zach Zakharian,Andy Perkins,Robert Frankus,IBM Redbooks,2008-12-16 Formerly known as DB2 Warehouse InfoSphere™ Warehouse enables a unified powerful data warehousing environment It provides access to structured and unstructured data as well as operational and transactional data In this IBM Redbooks publication we provide a brief overview of InfoSphere Warehouse but the primary objective is to discuss and describe the capabilities of one particular component of the InfoSphere Warehouse which is InfoSphere Warehouse Cubing Services InfoSphere Warehouse Cubing Services is designed to provide a multidimensional view of data stored in relational databases for significantly improved query and analysis capabilities For this there are particular schema designs that are typically used for these data warehouse and data mart databases called dimensional or cube models Optimization techniques are used to dramatically

improve the performance of the OLAP queries which are a core component of data warehousing and analytics InfoSphere Warehouse Cubing Services works with business intelligence BI tools and clients such as Cognos Alphablox and Microsoft Excel through client interfaces to accelerate OLAP queries from many data sources We describe these interfaces and provide examples of how to use them to improve the performance of your OLAP queries

Co-locating Transactional and Data Warehouse Workloads on System z Mike Ebbers, Dino Tonelli, Jason Arnold, Patric Becker, Yuan-Chi Chang, Willie Favero, Shantan Kethireddy, Nin Lei, Shirley Lin, Ron Lounsbury, Susan Widing Lynch, Cristian Molaro, Deepak Rangarao, Michael Schapira, IBM Redbooks, 2010-12-03

As business cycles speed up many customers gain significant competitive advantage from quicker and more accurate business decision making by using real data For many customers choosing the path to co locate their transactional and analytical workloads on System z better leverages their existing investment in hardware software and skills We created a project to address a number of best practice questions on how to manage these newer analytical type workloads especially when co located with traditional transactional workloads The goal of this IBM Redbooks publication is to provide technical guidance and performance trade offs associated with resource management and potentially DB2 data sharing in a variety of mixed transactional data warehouse System z topologies The term co location used here and in the rest of the book is specifically defined as the practice of housing both transactional OLTP and data warehouse analytical workloads within the same System z configuration We also assumed that key portions of the transactional and data warehouse databases would reside on DB2 for z OS The databases may or may not reside in a DB2 data sharing environment we discuss those pros and cons in this book The intended audience includes DB2 data warehouse architects and practitioners who are facing choices in resource management and system topologies in the data warehouse arena This specifically includes Business Intelligence BI administrators DB2 database administrators DBAs and z OS performance administrators systems programmers In addition decision makers and architects can utilize this book to assist in making platform and database topology decisions The book is divided into four parts Part I Introducing the co location project covers the System z value proposition and why one should consider System z as the central platform for their data warehousing business analytics needs Some topics are risk avoidance via data consolidation continuous availability simplified disaster recovery IBM Smart Analytics Optimizer reduced network bandwidth requirements and the unique virtualization and resource management capabilities of System z LPAR z VM and WLM Part I also provides some of the common System z co location topologies along with an explanation of the general pros and cons of each This would be useful input for an architect to understand where a customer is today and where they might consider moving to Part II Project environment covers the environment products workloads workload drivers and data models implemented for this study The environment consisted of a logically partitioned z10TM 32way running z VM Linux and z OS operating system instances On those instances we ran products such as z OS DB2 V9 IBM Cognos Business Intelligence Version 8 4 for Linux on System z InfoSphereTM

Warehouse for System z InfoSphere Change Data Capture z OS WebSphere V7 Tivoli Omegamon for DB2 Performance expert Utilizing these products we created transactional OLTP data warehouse query and data warehouse refresh workloads All the workloads were based on an existing web based transactional Bookstore workload that s currently utilized for internal testing within the System p and z labs While some IBM Cognos BI and ISWz product usage and experiences information is covered in this book we do not go into the depth typically found in IBM Redbooks publications since there s another book focused specifically on that

The Design Manager's Handbook John Eynon,CIOB (The Chartered Institute of Building),2013-01-23 Design management as a recognised role in the built environment industry is relatively new initially arising from the need for better co ordination and delivery of design information from design teams to main contractors particularly important as procurement routes involving contractor led design have become much more commonplace The advent of design packages driven by specialist sub contractors has also increased the need for co ordination and management of the design process With the growing complexity of construction projects effective design management is increasingly central to project success BIM as it gains acceptance across the industry will undoubtedly have a huge impact on project delivery process and the role of the Design Manager The CIOB Design Manager s Handbook covers subjects such as design process and management tools the role of the Design Manager value management and innovation procurement routes and implications people dynamics and factors that will affect the development of the Design Manager s role in the future including BIM It will ensure Design Managers understand the processes tools and skills that are required to be successful in the role and will assist them in delivering real value to complex construction projects Written for both the Design Manager practitioner and students on construction related degree courses anyone interested in construction based design management will also find the book useful
