**Advances in IC Engines and Combustion Technology** Ashwani K. Gupta, Hukam C. Mongia, Pankaj Chandna, Gulshan Sachdeva, 2020-08-18 This book comprises select peer reviewed proceedings of the 26th National Conference on IC Engines and Combustion NCICEC 2019 which was organised by the Department of Mechanical Engineering National Institute of Technology Kurukshetra under the aegis of The Combustion Institute Indian Section CIIS The book covers latest research and developments in the areas of combustion and propulsion exhaust emissions gas turbines hybrid vehicles IC engines and alternative fuels The contents include theoretical and numerical tools applied to a wide range of combustion problems and also discusses their applications This book can be a good reference for engineers educators and researchers working in the area of IC engines and combustion

*Artificial Intelligence in Material Science* Mohamed Arezki Mellal, 2024-12-11

Artificial intelligence AI in the form of machine learning and nature inspired optimization algorithms are vastly used in material science These techniques improve many quality metrics such as reliability and ergonomics This book highlights the recent challenges in this field and helps readers to understand the subject and develop future works It reviews the latest methods and applications of AI in material science It covers a wide range of topics including Material processing Properties prediction Conventional machining such as turning boring grinding and milling non conventional machining such as electrical discharge machining electrochemical machining laser machining plasma machining ultrasonic machining chemical machining and water jet machining Machine tools such as programming design and maintenance AI techniques reviewed in the book include Machine learning Fuzzy logic Genetic algorithms Particle swarm optimization Cuckoo search Grey wolf optimizer and Ant colony optimization

**Real-Time Simulation Technologies: Principles, Methodologies, and Applications**

Katalin Popovici, Pieter J. Mosterman, 2017-12-19 Real Time Simulation Technologies Principles Methodologies and Applications is an edited compilation of work that explores fundamental concepts and basic techniques of real time simulation for complex and diverse systems across a broad spectrum Useful for both new entrants and experienced experts in the field this book integrates coverage of detailed theory acclaimed methodological approaches entrenched technologies and high value applications of real time simulation all from the unique perspectives of renowned international contributors Because it offers an accurate and otherwise unattainable assessment of how a system will behave over a particular time frame real time simulation is increasingly critical to the optimization of dynamic processes and adaptive systems in a variety of enterprises These range in scope from the maintenance of the national power grid to space exploration to the development of virtual reality programs and cyber physical systems This book outlines how for these and other undertakings engineers must assimilate real time data with computational tools for rapid decision making under uncertainty Clarifying the central concepts behind real time simulation tools and techniques this one of a kind resource Discusses the state of the art important challenges and high impact developments in simulation technologies Provides a basis for the study of real time simulation as

a fundamental and foundational technology Helps readers develop and refine principles that are applicable across a wide variety of application domains As science moves toward more advanced technologies unconventional design approaches and unproven regions of the design space simulation tools are increasingly critical to successful design and operation of technical systems in a growing number of application domains This must have resource presents detailed coverage of real time simulation for system design parallel and distributed simulations industry tools and a large set of applications I-94
