11.1 **Basaltic and andesitic rocks** – Basaltic and andesitic rocks are the most common types of igneous rocks on Earth. They are both mafic (rich in magnesium and iron) and are typically found in the oceanic crust and in the upper mantle.

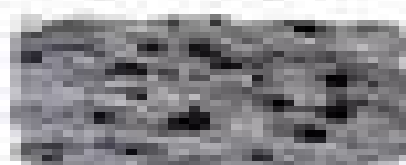

Basaltic rocks are typically dark in color and have a fine-grained texture. They are formed from the rapid cooling of magma. Andesitic rocks are typically lighter in color and have a more crystalline texture. They are formed from the slower cooling of magma. Both types of rocks are important components of the Earth's crust and are found in a variety of tectonic settings.
