Agile Data-Oriented Research Tools to Support Smallholder Farm System Transformation James Hammond, Mark Van Wijk, Aniruddha Ghosh, Tim Pagella, Jacob Van Etten, 2023-05-09 Smallholder farming systems contribute a substantial quantity of the food consumed in many lower and middle income countries and contribute to the national and local economies Despite the importance of smallholder farming a transformation is needed in order to deliver food security and decent incomes for the farmers themselves and at the national level This transformation must also be sustainable in terms of environmental impacts and social equity in order to be successful in the long term The pressures of population growth climate change and land fragmentation compound the problem Addressing these overlapping issues is a big challenge One obstacle is the lack of good quality granular data linking these issues together Household surveys are the workhorse method for gathering such data but there are well known problems that prevent household survey data from building up a big picture and delivering insights beyond the geographical boundary of each individual study Such obstacles include the lack of access to datasets differences in survey design and respondent biases Agile data oriented research tools can help to overcome these challenges We use the term agile to imply methods that do not attempt exhaustive measurements which are designed to be easy to use and which entail some degree of flexibility in terms of adaptation to local conditions and integration with other tools or methods Often these methods also nudge the behavior of tool users towards best practices In recent years various research tools and approaches have been published which fit within our definition of agile data oriented research tools The domains these tools function in include monitoring and evaluation intervention targeting tailored information delivery citizen science credit scoring and user feedback collection all with the over arching aim to improve data quality and access for those studying the sustainable development of smallholder farming systems The goal of this Research Topic is to better define that niche the ecosystem of tools and current practices and to explore how such approaches can provide the underpinning knowledge required for the transformation of smallholder farming systems One example of an agile data oriented research tool is the

Rural Household Multi Indicator Survey RHoMIS It is a modular digital system for building household surveys addressing the common topics in smallholder development It was purposefully designed to give a broad overview of the farm system whilst keeping survey duration to a minimum to be user friendly in implementation and to be sufficiently flexible to function in a broad variety of locations and projects Since 2015 it has been used by 30 organizations in 32 countries to interview over 34 000 households The tool and database are open access and a community of practice is developing around the tool We particularly welcome contributions that engage with the RHoMIS tool and data However we also describe the tool in order to provide an example of what is meant by an agile data oriented research tool and welcome contributions focusing on other tools or methodologies We encourage the submission of manuscripts addressing the above topic and those which fit within one of the following three sub themes i Perspectives or review articles which explore the niche best practices or promising approaches in agile data oriented research tools for smallholder farm system transformation Also technology and code articles that describe new tools are welcomed ii Original research articles presenting analyses based on data derived from agile data oriented tools used at the project level Examples include impact evaluations adoption studies targeting studies or adaptive management and should reflect on the additional benefit leveraged by the agile method applied iii Original research articles that make use of the large amounts of data generated by such agile methods and or link between agile data and other data sources Examples include meta analyses of data from multiple studies layering data collected from different agile tools or linking agile data to remote sensing or large scale modeling outputs

Neuroepidemiology in Tropical Health Pierre-Marie Preux, Michel Dumas, 2017-09-21
Neuroepidemiology in Tropical Health covers major neurological diseases of relevance in tropical settings and examines the specificities of epidemiology of neurological diseases in the context of tropical countries that face many challenges when compared to the developed world Part One focuses on methods and their eventual specificities and how such methods like sampling can be adapted for specific scenarios Parts Two and Three discuss environmental factors and their consequences for neurology in the tropical world as well as large geographical areas and their specificities Finally Part Four presents relevant neurological diseases in in depth chapters This invaluable information will help readers recognize the various neurological conditions presented with the inclusion of their aetiologies and treatment in tropical areas The book therefore fills a gap in the neuroepidemiology literature with chapters written by an international collection of experienced authors in the field Highlights differences and similarities between neuroepidemiology in tropical areas and temperate zones with a focus on methods and underlying factors Covers environmental factors in the tropical world and their consequences for neurology Chapters include references key articles books protocols for additional detailed study Includes wide topics of neurological disease in the tropics not only infectious diseases but also nutrition and public health

Leveraging Gender, Youth and Social Networks for Inclusive and Transformative Livestock Production in the Tropics and Subtropics Stefan Burkart, Renee Marie Bullock, Juan Andrés Cardoso Arango, Marcela Ramos , Natalia Triana Angel, 2024-10-14
Social research has provided critical insights into understanding gender and generational gaps and the ways that power relations create differentiated access to agricultural and livestock technologies and services Many of these technologies and services such as improved feed options grass legume associations silvo pastoral systems improved animal genetics health and welfare grazing management and associated water and soil health and manure management have the potential to improve livelihoods

sustainability food security and generational transfer dynamics Their adoption contributes to mitigating many of the impacts the livestock sector has on the environment through for example reducing greenhouse gas emissions and deforestation increasing biodiversity restoration and land sparing Likewise their adoption helps producers adapt to climate change
