Water Displacement Mercury

Pump ,1985 A water displacement mercury pump has a fluid inlet conduit and diffuser a valve a pressure cannister and a fluid outlet conduit The valve has a valve head which seats in an opening in the cannister The entire assembly is readily insertable into a process vessel which produces mercury as a product As the mercury settles it flows into the opening in the cannister displacing lighter material When the valve is in a closed position the pressure cannister is sealed except for the fluid inlet conduit and the fluid outlet conduit Introduction of a lighter fluid into the cannister will act to displace a heavier fluid from the cannister via the fluid outlet conduit The entire pump assembly penetrates only a top wall of the process vessel and not the sides or the bottom wall of the process vessel This insures a leak proof environment and is especially suitable for processing of hazardous materials
