

Phylogenetic Trees

How do the changes in gene sequences allow us to reconstruct the evolutionary relationships between related species?

Why?

The saying "Don't judge a book by its cover." could be applied to the topic of evolution. For example, humans share 75% of their DNA with chickens. Biologists point to this as evidence that humans and chickens once shared a common ancestor. The advent of DNA technology has given scientists the tools with which to examine how closely related certain species are. DNA analysis allows scientists to construct phylogenetic trees whose branches link together the relatedness of different organisms.

Model 1 – Phylogenetic Trees

1. Refer to Model 1.
 - a. How long ago did the common ancestor of all the organisms on this phylogenetic tree exist?
 - b. Which two lines diverged 30 million years ago?
 - c. List all modern descendants of the organism that was alive at the point indicated by the asterisk.

Current Topics in Computational Molecular Biology Tao Jiang, Ying Xu, Michael Q. Zhang, 2002 A survey of current topics in computational molecular biology Computational molecular biology or bioinformatics draws on the disciplines of biology mathematics statistics physics chemistry computer science and engineering It provides the computational support for functional genomics which links the behavior of cells organisms and populations to the information encoded in the genomes as well as for structural genomics At the heart of all large scale and high throughput biotechnologies it has a growing impact

on health and medicine This survey of computational molecular biology covers traditional topics such as protein structure modeling and sequence alignment and more recent ones such as expression data analysis and comparative genomics It combines algorithmic statistical database and AI based methods for studying biological problems The book also contains an introductory chapter as well as one on general statistical modeling and computational techniques in molecular biology Each chapter presents a self contained review of a specific subject Not for sale in China including Hong Kong Biology Vernon L. Avila,1995 This exciting edition of Avila s popular biology textbook offers current accurate clearly written and well organized information including seven new chapters Written for introductory biology courses this text represents the philosophy that an understanding of the principles of biology from a cellular perspective is key to a biological literacy and a full appreciation of the many intricacies of life Aquaporins Baoxue Yang,2023-01-30 This book provides a state of the art report on our current understanding of aquaporins and the future direction of the field Aquaporins AQP are a group of water channel proteins that are specifically permeable to water and other small molecules such as glycerol and urea To date thirteen water channel proteins AQP0 AQP12 have been cloned and the mechanisms and physiological functions of water transport across biological membranes have long been the subject of interest Recent advances in the molecular biology and physiology of water transport have yielded new insights into how and why water moves across cell membranes and studies on aquaporin knockout mouse models suggest that aquaporins are involved in the development of some diseases and they may be useful targets of research into selective inhibitor drugs By focusing on the advances made over the last 30 years in the biophysics genetics protein structure molecular biology physiology pathophysiology and pharmacology of aquaporins in mammalian cell membranes this book provides novel insights into further mechanisms and the physiological significance of water and some small molecule transport in mammals in order to stimulate further research in new directions In the second version fourteen chapters will be updated base on the most recent research articles Ten new chapters will be added

Little Species, Big Mystery Debbie Argue,2022-08-02 There is only one kind of human on earth today us But we are only one of a number of human species primates of the Hominini tribe that have existed on our planet across the millennia In 2004 the world was astounded by the discovery of Homo floresiensis a species of human never encountered before on the island of Flores in the Indonesian archipelago A very short thickset being with long arms and feet and an appetite for stegodons a now extinct relative of modern elephants it was soon nicknamed the hobbit As recently as 52 500 years ago at a time when our own ancestors were spreading around the world these hobbit cousins lived also at least on Flores In Little Species Big Mystery archaeologist Debbie Argue takes us on a journey of thrilling scientific discovery recounting the unearthing of H floresiensis the archaeological expeditions that have followed other finds including that of a small Philippines hominin and new paths of research and discussion Argue conveys the excitement of searching for and finding clues to a lost past and the animated discussions that have flowed from their discovery She provides much contextual information to

strengthen our grasp of the essential coordinates of this field and stimulate our interest in the shadowy fascinating realm of prerecorded time

Theistic Evolution J. P. Moreland, Stephen C. Meyer, Christopher Shaw, Ann K. Gauger, Wayne Grudem, 2017-11-15 Many prominent Christians insist that the church must yield to contemporary evolutionary theory and therefore modify traditional biblical ideas about the creation of life They argue that God used albeit in an undetectable way evolutionary mechanisms to produce all forms of life Featuring two dozen highly credentialed scientists philosophers and theologians from Europe and North America this volume contests this proposal documenting evidential logical and theological problems with theistic evolution making it the most comprehensive critique of theistic evolution yet produced

Daniel C. Laughlin, 2023-07-12 How do plants make a living Some plants are gamblers others are swindlers Some plants are habitual spenders while others are strugglers and miserly savers Plants have evolved a spectacular array of solutions to the existential problems of survival and reproduction in a world where resources are scarce disturbances can be deadly and competition is cut throat Few topics have both captured the imagination and furrowed the brows of plant ecologists yet no topic is more important for understanding the assembly of plant communities predicting plant responses to global change and enhancing the restoration of our rapidly degrading biosphere The vast array of plant strategy models that characterize the discipline now require synthesis These models tend to emphasize either life history strategies based on demography or functional strategies based on ecophysiology Indeed this disciplinary divide between demography and physiology runs deep and continues to this today The goal of this accessible book is to articulate a coherent framework that unifies life history theory with comparative functional ecology to advance prediction in plant ecology Armed with a deeper understanding of the dimensionality of life history and functional traits we are now equipped to quantitatively link phenotypes to population growth rates across gradients of resource availability and disturbance regimes Predicting how species respond to global change is perhaps the most important challenge of our time A robust framework for plant strategy theory will advance this research agenda by testing the generality of traits for predicting population dynamics Monthly Catalogue, United States Public Documents , 1995
