Shepherd MD, DPhil,2009-10-28 For modern scientists history often starts with last week s journals and is regarded as largely a quaint interest compared with the advances of today However this book makes the case that measured by major advances the greatest decade in the history of brain studies was mid

twentieth century especially the 1950s The first to focus on worldwide contributions in this period the book ranges through dozens of astonishing discoveries at all levels of the brain from DNA Watson and Crick through growth factors Hamburger and Levi Montalcini excitability Hodgkin and Huxley synapses Katz and Eccles dopamine and Parkinson s Carlsson visual processing Hartline and Kuffler the cortical column Mountcastle reticular activating system Morruzzi and Magoun and REM sleep Aserinsky to stress Selye learning Hebb and memory HM and Milner The clinical fields are also covered from Cushing and Penfield psychosurgery and brain energy metabolism Kety to most of the major psychoactive drugs in use today beginning with Delay and Deniker and much more The material has been the basis for a highly successful advanced undergraduate and graduate course at Yale with the classic papers organized and accessible on the web There is interest for a wide range of readers academic and lay because there is a focus on the creative process itself on understanding how the combination of unique personalities innovative hypotheses and new methods led to the advances Insight is given into this process through describing the struggles between male and female student and mentor academic and private sector and the roles of chance and persistence The book thus provides a new multidisciplinary understanding of the revolution that created the modern field of neuroscience and set the bar for judging current and future advances **Modern Science** ,1958

Modern Methods of Drug Discovery Alexander Hillisch,Rolf Hilgenfeld,2012-11-28 Research in the pharmaceutical industry today is in many respects quite different from what it used to be only fifteen years ago There have been dramatic changes in approaches for identifying new chemical entities with a desired biological activity While chemical modification of existing leads was the most important approach in the 1970s and 1980s high throughput screening and structure based design are now major players among a multitude of methods used in drug discovery Quite often companies favor one of these relatively new approaches over the other e g screening over rational design or vice versa but we believe that an intelligent and concerted use of several or all methods currently available to drug discovery will be more successful in the medium term What has changed most significantly in the past few years is the time available for identifying new chemical entities Because of the high costs of drug discovery projects pressure for maximum success in the shortest possible time is higher than ever In addition the multidisciplinary character of the field is much more pronounced today than it used to be As a consequence researchers and project managers in the pharmaceutical industry should have a solid knowledge of the more important methods available to drug discovery because it is the rapidly and intelligently combined use of these which will determine the success or failure of preclinical projects **Modern Science** Encyclopaedia Britannica. Library Research Service,1955 *Modern Issues and Methods in Biostatistics* Mark Chang,2011-07-15 Classic biostatistics a branch of statistical science has as its main focus the applications of statistics in public health the life sciences and the pharmaceutical industry Modern biostatistics beyond just a simple application of statistics is a confluence of statistics and knowledge of multiple intertwined fields The application demands the advancements in computer technology and the rapid growth of life

science data e g genomics data have promoted the formation of modern biostatistics There are at least three characteristics of modern biostatistics 1 in depth engagement in the application fields that require penetration of knowledge across several fields 2 high level complexity of data because they are longitudinal incomplete or latent because they are heterogeneous due to a mixture of data or experiment types because of high dimensionality which may make meaningful reduction impossible or because of extremely small or large size and 3 dynamics the speed of development in methodology and analyses has to match the fast growth of data with a constantly changing face This book is written for researchers biostatisticians statisticians and scientists who are interested in quantitative analyses The goal is to introduce modern methods in biostatistics and help researchers and students quickly grasp key concepts and methods Many methods can solve the same problem and many problems can be solved by the same method which becomes apparent when those topics are discussed in this single volume
