Hilton, E. John Larsen, A. N. Mosich, 1987 **Modern Advanced Accounting in Canada** Murray W. Hilton, 1999 Modern Advanced Accounting in Canada continues the approach that made it the best selling advanced financial accounting text in Canada This includes the complete comprehensive coverage of business combinations the preparation of consolidated financial statements the consolidation of joint ventures and foreign subsidiaries and push down accounting Consolidation coverage continues to emphasize the direct approach accompanied by a building block development of the consolidation basics Coverage of unrelated topics bankruptcy and receivership partnerships and accounting for not for profit organizations has also been maintained *Modern Aerodynamic Methods for Direct and Inverse Applications* Wilson C. Chin, 2019-03-21 A powerful new monograph from an aerodynamicist reviewing modern conventional aerodynamic approaches this volume covers aspects of subsonic transonic and supersonic flow inverse problems shear flow analysis jet engine power addition engine and airframe integration and other areas providing readers with the tools needed to evaluate their own ideas and to implement the newer methods suggested in this book This new book by a prolific fluid dynamicist and mathematician who has published more than twenty research monographs represents not just another contribution to aerodynamics but a book that raises serious questions about traditionally accepted approaches and formulations providing new methods that solve longstanding problems of importance to the industry While both conventional and newer ideas are discussed the presentations are readable and geared to advanced undergraduates with exposure to elementary differential equations and introductory aerodynamics principles Readers are introduced to fundamental algorithms with Fortran source code for basic applications such as subsonic lifting airfoils transonic supercritical flows utilizing mixed differencing models for inviscid shear flow aerodynamics and so on These are models they can extend to include newer effects developed in the second half of the book Many of the newer methods have appeared over the years in various journals and are now presented with deeper perspective and integration This book helps readers approach the literature more critically Rather than simply understanding an approach for instance the powerful type differencing behind transonic analysis or the rationale behind conservative formulations or the use of Euler equation methods for shear flow analysis when they are unnecessary the author guides and motivates the user to ask why and why not and what if And often more powerful methods can be developed using no more than simple mathematical manipulations For example Cauchy Riemann conditions which are powerful tools in subsonic airfoil theory can be readily extended to handle compressible flows with shocks rotational flows and even three dimensional wing flowfields in a variety of applications to produce powerful formulations that address very difficult problems This
