

## Chapter 9

### MUSCULAR SYSTEM

#### Introduction

The muscular system consists of skeletal muscles, which through their connection to bones via tendons help to produce movement of the body. In addition to movement, skeletal muscle assists in heat production, posture, and glycemic control. Smooth and skeletal muscles work to control body openings (such as the mouth or anus) and passage of substances from one place to another (such as food through the gastrointestinal system). The purpose of this lab is to explore microscopic and macroscopic features of skeletal, smooth, and cardiac muscle.

Specific skeletal muscles, associated attachment points, and actions will be introduced.

#### Objectives:

1. Distinguish the three muscle tissue types on microscope slides.
2. Identify structures of the skeletal muscle fiber.
3. Identify structures in a sarcomere.
4. Identify specific skeletal muscles and describe a main action for each.
5. Describe how skeletal muscles are attached to the framework of the body

#### ***Prelab Assignment***

Prior to lab, study in your textbook the structural and functional organization of muscles; the types and characteristics of muscular tissue (Chapter 11); microscopic anatomy of skeletal muscle (Chapter 11); and the nerve-muscle relationship (Chapter 11). Study the specific muscles of the body as outlined in the lab manual. Be sure to consider the location, name, and action of each listed muscle.
