Ford Big-Block Parts Interchange George Reid, 2017-12-15 Over the course of performance car history and specifically muscle car history big block engines are particularly beloved and for good reason Not only are they the essence of what a muscle car is but before modern technology and stroker engines they were also the best way to make a lot of horsepower All of the Detroit manufacturers had their versions of big block engines and Ford was no exception Actually Ford was somewhat unique in that it had two very different big block engine designs during the muscle car era The FE engine was a design pioneered in the late 1950s primarily as a

more powerful replacement for the dated Y block design because cars were becoming bigger and heavier and therefore necessitated more power to move. What started as torquey engines meant to move heavyweight sedans morphed into screaming high performance mills that won Le Mans and drag racing championships through the 1960s. By the late 1960s the design was dated so Ford replaced the FE design with the 385 series also known as the Lima design which was more similar to the canted valve Cleveland design being pioneered at the same time. It didn't share the 1960s pedigree of racing success but the new design was better in almost every way it exists via Ford motorsports offerings to this day. In Ford Big Block Parts Interchange Ford expert and historian George Reid covers both engines completely. Interchange and availability for all engine components are covered including cranks rods pistons camshafts engine blocks intake and exhaust manifolds carburetors distributors and more. Expanding from the previous edition of High Performance Ford Parts Interchange that covered both small and big block engines in one volume this book cuts out the small block information and devotes every page to the FE Series and 385 big blocks from Ford which allows for more complete and extensive coverage.

Mustang and the Pony Car Revolution Michael W.R. Davis, 2014-04-07 Introduced at the opening of the New York World's Fair in April 1964 the Ford Mustang was based on mechanicals from the earlier Ford Falcon compact car. It quickly established a new motorcar category the pony car which was widely copied by domestic and overseas competitors. From the outset the Mustang represented inspired product planning and design followed by brilliantly

executed marketing Ford's Mustang team effort used every tool in the vehicle marketing toolbox clever teasers long before the new product went on sale unprecedented publicity simple but effective advertising the stage at the World's Fair movie placement distribution of toy plastic models and even a replica pedal car for the young drivers of the future With a measure of luck it became a classic case of releasing the right product at the right time and Ford sold one million units in less than two years

Northrop X-4 Bantam Pilot's Flight Operating Instructions United States Air Force, 2008-09-01 Designed without horizontal stabilizers the X-4 Bantam had a semi tailless design that bore some resemblance to Germany's Me 163 rocket plane The small twin jet craft relied on combined elevator and aileron surfaces known as elevons for pitch and roll control The role of the X-4 was to explore the transonic speed zone and to determine whether the design would lessen the stability and control problems affiliated with compressibility Although two Bantams were built only one proved mechanically sound The second was flown over eighty times by Northrop Air Force and NACA pilots They learned that the X-4 was sensitive in pitch and showed a tendency to hunt about all three axes as it approached Mach 1.0 Thus the X-4's design proved a failure Originally printed by Northrop NACA and the USAF this handbook provides a fascinating glimpse inside the cockpit of this experimental plane The manual was recently declassified
