Abstract: This paper examines the effects of the 1997-1998 Asian financial crisis on the export performance of the manufacturing sector in the Republic of Korea. The paper finds that the crisis had a significant negative impact on the export performance of the manufacturing sector, particularly in the case of the export of capital goods. The paper also finds that the export performance of the manufacturing sector was more resilient to the crisis in the case of the export of consumer goods. The paper discusses the reasons for these findings and suggests policy implications.

Students will never plagiarize! For 2000-2001, students receive points of 100% only when they do not plagiarize. For 2001-2002, students receive points of 100% only when they do not plagiarize. This should ensure that they keep the work honest and plagiarism-free. The student who plagiarizes will be charged the amount of money.

## Electrochemistry Lab 19b:

**Electroactive Polymer Electrochemistry** Michael E.G. Lyons, 2013-06-29 The development of tailor-made electrode surfaces using electroactive polymer films has been one of the most active and exciting areas of electrochemistry over the last 15 years. The properties of these materials have been examined by a wide range of scientists from a variety of perspectives and now electroactive polymer research is considered to be a reasonably mature area of research endeavor. Much is now understood about the fundamental mechanism of conduction in these materials. A wide range of electrochemical techniques may be used to probe the conductivity processes in these materials and more recently a number of in situ spectroscopic techniques have been used to further elucidate the structure of these materials. The in situ spectroscopies and allied techniques have also been used to obtain correlations between structure and redox activity. The applications found for electroactive polymers are many and varied and range from thin film amperometric chemical and biological sensors, electrocatalytic systems, drug delivery devices and advanced battery systems through to molecular electronic devices. The research literature on electroactive polymers is truly enormous and can daunt even the most hardened researcher. The vast quantity of material reported in the literature can also intimidate beginning graduate students. Hence the present book. The original idea for this book arose as a result of a series of lectures on chemically modified electrodes and electroactive polymers given by the writer to final year undergraduates at Trinity College Dublin. *U.S. Government Research Reports*, 1963 **General Catalog** University of Missouri, 1914 Corrosion Monitoring in Nuclear Systems EFC 56 Stefan Ritter, Anders Molander, 2017-09-20 Corrosion remains one of the key issues affecting the performance and availability of nuclear power plants. Therefore reliable in plant corrosion monitoring methods are essential both for the future operation of existing plants and to ensure the safety of future nuclear waste disposal systems. In two parts this book was stimulated by a workshop organised by EFC Working Party 4 on Nuclear Corrosion and the European Cooperative Group on Corrosion Monitoring of Nuclear Materials EGC COMON. The first part deals mainly with research into the detection of stress corrosion crack initiation in nuclear power plant environments, essentially high temperature water at around 300 °C by various methods, particularly the electrochemical noise technique but also including the electrochemical impedance, acoustic emission and direct current potential drop methods. The second part addresses the goal to develop in situ techniques and includes examples of the application of electrochemical corrosion potential monitoring. This book will be of particular interest to scientists and engineers concerned with the mitigation of corrosion in nuclear systems. **General Catalogue** Massachusetts Institute of Technology, 1938 General Catalogue, 1915 *Nuclear Science Abstracts*, 1976 **Buildings and Concepts** Myron Goldsmith, 1987 **Electrochemically Engineered Nanoporous Materials** Dusan Losic, Abel Santos, 2015-07-18 This book provides in depth knowledge about the fabrications, structures, properties and applications of three outstanding electrochemically engineered nanoporous materials including porous silicon, nanoporous alumina and

nanotubular titania The book integrates three major themes describing these materials The first theme is on porous silicon reviewing the methods for preparation by electrochemical etching properties and methods for surface functionalization relevant for biosensing applications Biomedical applications of porous silicon are major focus described in several chapters reviewing recent developments on bioanalysis emerging capture probes and drug delivery The second theme on nanoporous alumina starts with describing the concept of self organized electrochemical process used for synthesis nanopore and nanotube structures of valve metal oxides and reviewing recent development and progress on this field The following chapters are focused mainly on optical properties and biosensing application of nanoporous alumina providing the reader with the depth of understanding of the structure controlled optical and photonic properties and design of optical biosensing devices using different detection principles such as photoluminescence surface plasmon resonance reflective spectrometry wave guiding Raman scattering etc The third theme is focused on nanotubular titania reviewing three key applications including photocatalysis solar cells and drug delivery The book represents an important resource for academics researchers industry professionals post graduate and high level undergraduate students providing them with both an overview of the current state of the art on these materials and their future developments *Bulletin* University of Missouri at Rolla, 1916
