Numerical Calculations for Process Engineering Using Excel VBA Chi M. Phan, 2023-12-01 Numerical Calculations for Process Engineering Using Excel VBA provides numerical treatment of process engineering problems with VBA programming and Excel spreadsheets The problems are solving material and energy balances optimising reactors and modelling multiple factor processes The book includes both basic and advanced codes for numerical calculations The basic methods are presented in different variations tailored to

particular applications Some macros are combined with each other to solve engineering problems Examples include combining the bisection method and binary search to optimise an implicit correlation combining golden section search with Euler's method to optimise a reactor and combining bisection code and Euler's method to solve steady state heat distribution The text also includes nonconventional examples such as harmony search and network analysis The examples include solutions to common engineering problems such as adiabatic flame temperature plug flow reactor conversion batch reactor heat diffusion and pinch analysis of heat exchanger networks The VBA code is presented with mathematical equations and flowcharts enabling the audience to adopt the solutions to different problems The book contains many demonstrations of numerical techniques to guide users It also includes useful summaries of VBA commands functions and Excel predefined functions accessible in VBA While the book is developed primarily for undergraduate students the book is a helpful resource for postgraduate students and engineers

Maple V: Mathematics and its Applications Robert J. Lopez, 2012-12-06 The Maple Summer Workshop and Symposium MSWS 94 reflects the growing community of Maple users around the world This volume contains the contributed papers A careful inspection of author affiliations will reveal that they come from North America Europe and Australia In fact fifteen come from the United States two from Canada one from Australia and nine come from Europe Of European papers two are from Germany two are from the Netherlands two are from Spain and one each is from Switzerland Denmark and the United Kingdom More important than the geographical diversity is the intellectual range of the contributions We begin to see in this collection of works papers in which Maple is used in an increasingly flexible way For example there is an application in computer science that uses Maple as a tool to create a new utility There is an application in abstract algebra where Maple has been used to create new functionalities for computing in a rational function field There are applications to geometrical optics digital signal processing and experimental design

Elements of Chemical Reaction Engineering is a completely revised version of the worldwide best selling book. It combines authoritative coverage of the principles of chemical reaction engineering with an unsurpassed focus on critical thinking and creative problem solving employing open ended questions and stressing the Socratic method. Clear and superbly organized, it integrates text, visuals, and computer simulations to help readers solve even the most challenging problems through reasoning rather than by memorizing equations. Thorough coverage of the fundamentals of chemical reaction engineering forms the backbone of this trusted text. To enhance the transfer of core skills to real life settings, three styles of problems are included for each subject: Straightforward problems that reinforce the material; Problems that allow students to explore the issues and look for optimum solutions; Open ended problems that encourage students to practice creative problem solving skills. H. Scott Fogler has updated his classic text to provide even more coverage of bioreactions, industrial chemistry with real reactors and reactions, and an even broader range of applications along with the newest digital techniques such as FEMLAB. The fourth edition of Elements of Chemical Reaction Engineering contains wide ranging examples from smog to blood clotting, ethylene oxide production to tissue engineering, antifreeze to cobra bites and computer chip manufacturing to chemical plant safety. About the CD ROM: The CD ROM offers numerous enrichment opportunities for both students and instructors including the following: Learning Resources Summary Notes; Chapter specific interactive material to address the different learning styles in the Felder-Solomon learning style index; Learning Resources Web modules; reactor lab modules; interactive computer modules; solved problems and problem solving heuristics; Living Example Problems; More than fifty five interactive simulations in POLYMATH software which allow students to explore the examples and ask what if questions; Professional Reference Shelf: Advanced content ranging from collision and transition state theory to aerosol reactors, DFT runaway reactions and pharmacokinetics; Additional Study Materials: Extra homework problems, course syllabi and Web links to related material; Latest Software to Solve Digital Age Problems: FEMLAB to solve PDEs for the axial and radial concentration and temperature profiles and Polymath to do regression, solve nonlinear equations and solve single and coupled ODEs. Throughout the book, icons help readers link concepts and procedures to the material on the CD ROM for fully integrated learning and reference.
